this comprehensive book approaches sustainability from two directions the reduction of pollution and the maintaining of existing resources both of which are addressed in a thorough examination of the main chemical processes and their impact divided into five sections each introduced by a leading expert in the field the book takes the reader through the various types of chemical processes demonstrating how we must find ways to lower the environmental cost of both pollution and contributions to climate change of producing chemicals each section consists of several chapters presenting the latest facts and opinion on the methodologies being adopted by the chemical industry to provide a more sustainable future a follow up to materials for a sustainable future royal society of chemistry 2012 this book will appeal to the same broad readership industrialists and investors policy makers in local and central governments students teachers scientists and engineers working in the field and finally editors journalists and the general public who need information on the increasingly popular concepts of sustainable living

because of their intuitive layout extensive mathematical capabilities and convenient graphics spreadsheets provide an easy straightforward route to scientific computing this textbook for undergraduate and entry level graduate chemistry and chemical engineering students uses excel the most powerful available spreadsheet to explore and solve problems in general and chemical data analysis this is the only up to date text on the use of spreadsheets in chemistry the book discusses topics including statistics chemical equilibria ph calculations titrations and instrumental methods such as chromatography spectrometry and electroanalysis it contains many examples of data analysis and uses spreadsheets for numerical simulations and testing analytical procedures it also

treats modern data analysis methods such as linear and non linear least squares in great detail as well as methods based on fourier transformation the book shows how matrix methods can be powerful tools in data analysis and how easily these are implemented on a spreadsheet and describes in detail how to simulate chemical kinetics on a spreadsheet it also introduces the reader to the use of vba the macro language of microsoft office which lets the user import higher level computer programs into the spreadsheet
