being what responsibilities do parents have to ensure their children s well being and what responsibilities does the state have in helping parents tim fowler argues that although parents are rightly seen as the primary caregivers society has a duty to ensure that children s interests are promoted despite the fact that the name of many characters mentioned in the old testament like david king of israel have been recently confirmed by archaeology as well as their epoch and the events in which they were involved most archaeologists continue to deny the historicity of the bible they view as pious fiction or a mythical account they argue that the major events in the bible such as the victory of abraham against chedorlaomer an unknown king of elam around 2000 bce the victory of moses against an unknown pharaoh around 1500 bce or the victory of esther an unknown persian queen against an unknown vizier of xerxes never existed because they left absolutely no evidence they also explain that according to what we know today these events could not have occurred these logical arguments are impressive but a precise chronological analysis based on absolute dates coupled with a rigorous historical investigation shows that all those major events really took place at the dates and places indicated this book provides a critical understanding of the challenges that exist in protecting the local and global environment through compliance efforts using existing environmental regulations the best compliance measures with the most useful regulations from over 50 countries are surveyed and are combined with science based quantitative analysis of geology hydrogeology and the chemistry of contaminants from anthropogenic sources the results are presented as a model that establishes a means by which protection of the environment can be greatly improved this is accomplished through a deeper understanding of our natural world and how anthropogenic activities and their management affect our planet features the first book that examines the successes of environmental regulation worldwide and highlights the areas that need improvement presents a tested and verified scientific model for enhanced environmental protection with scalability from local parcels to global levels describes and integrates the importance of understanding the geologic and hydrogeologic environment of urban and developed areas explains the importance of understanding the different types of pollution and their behavior in the environment identifies the need for consistency in banning chemicals that are harmful in not just one country but throughout the world there is an old saying that invention is the mother of necessity and this book is a result of that idea there would never be a need for such a book if the religions and religious authority would practice their traditions like native americans or the australian aborigines we know they have their gods costumes and traditions and just about everyone bar a few religious fanatics respects cultural heritage and wants them to revel in their anthropological significance in the same token the likelihood that a native american or aborigine is going to show up at your door preaching that bahloo the sun god is the reason man hates snakes and if you do not accept bahloo as your savior you will be walking the desert forever is essentially non existent your author lance gregorchuk designed this book to give the free thinker agnostic atheist fence sitter and even believer the facts for the arguments that there can be no god or gods the volume examines the state of the art of productivity and efficiency analysis it brings together a selection of the best papers from the 10th north american productivity workshop by analyzing world wide perspectives on challenges that local economies and institutions may face when changes in productivity are observed readers can quickly assess the impact of productivity measurement productivity growth dynamics of productivity change measures of labor productivity measures of technical efficiency in different sectors frontier analysis measures of performance industry instability and spillover effects the contributions in this volume focus on the theory and application of economics econometrics statistics management science and operational research related to problems in the areas of productivity and efficiency measurement popular techniques and methodologies including stochastic frontier analysis and data envelopment analysis are represented chapters also cover broader issues related to measuring understanding incentivizing and improving the productivity and performance of firms public services
