in a bid to claim scientific objects as requiring a significant amount of conceptual labor this book looks sequentially at instruments habits and museums the goal is to uncover how together these material and immaterial activities rules and commitments form one meaningful and credible blueprint revealing the building blocks of knowledge production they serve to conceptualize and examine the entire life of an instrument from its ideation and craft to its use reuse circulation recycling and if not obliterated its final entry into a museum it is such an epistemological triptych that guides this investigation

instruments constitute a classic member of the thematic role inventory yet they are usually analyzed only peripherally taking a back seat to the more studied members such as agent and patient this dissertation investigates the semantic reality behind the label instrument from the functionalist perspective of role reference grammar starting from a theoretical investigation of what instrumentality truly means when contrasted with related concepts like comitatives this book explores the morphosyntactic realization of instruments across a wide range of typologically diverse languages apart from the standard occurrences of instruments that come to mind from languages such as latin german or english this book delves into several less common constructions that feature the instrument relation such constructions include amongst others passives with instruments and particularly the instrument subject alternation a construction where the instrument seemingly appears as the subject of the sentence this construction displays variation along three dimensions 1 the instrument can vary from a very simple tool to a complicated machine 2 the predicate can vary substantially and 3 languages differ widely with respect to the construction's acceptability this makes for a complex playing field where the animacy of the instrument but also the aktionsart class of the predicate play a major role the last section of this book deals with linking the semantics of instruments and related concepts to their morphosyntactic realizations including the various encoding strategies that are available in any given language this book also features a concise introduction to role reference grammar dissertations in language and cognition this series explores issues of mental representation linguistic structure and representation and their interplay the research presented in this series is grounded in the idea explored in the collaborative research center the structure of representations in language cognition and

science sfb 991 that there is a universal format for the representation of linguistic and cognitive concepts

this is the first investigation of one of the main interests of astronomy in islamic civilization namely timekeeping by the sun and stars and the regulation of the astronomically defined times of muslim prayer the study is based on over 500 medieval astronomical

manuscripts first identified by the author now preserved in libraries all over the world and originally from the entire islamic world from the maghrib to central asia and the yemen the materials presented provide new insights into the early development of the prayer ritual in islam they also call into question the popular notion that religion could not inspire serious scientific activity only one of the hundreds of astronomical tables discussed here was known in medieval europe which is one reason why the entire corpus has remained unknown until the present a second volume also to be published by brill deals with astronomical instruments for timekeeping and other computing devices
