exercises and powerpoint slides for lecturers are available directly from the publisher we developed the first edition of this book because we perceived a need for a compilation on study design with application to studies of the ecology consertion and management of wildlife we felt that the need for coverage of study design in one source was strong and although a few books and monographs existed on some of the topics that we covered no single work attempted to synthesize the many facets of wildlife study design we

decided to develop this second edition because our original goal synthesis of study design remains strong and because we each gathered a substantial body of new material with which we could update and expand each chapter several of us also used the first edition as the basis for workshops and graduate teaching which provided us with many valuable suggestions from readers on how to improve the text in particular morrison received a detailed review from the graduate s dents in his wildlife study design course at texas a m university we also paid heed to the reviews of the first edition that appeared in the literature provides well organized coverage of statistical analysis and applications in biology kinesiology and physical anthropology with comprehensive insights into the techniques and interpretations of r spss excel and numbers output an introduction to statistical analysis in research with applications in the biological and life sciences develops a conceptual foundation in statistical analysis while providing readers with opportunities to practice these skills via research based data sets in biology kinesiology and physical anthropology readers are provided with a detailed introduction and orientation to statistical analysis as well as practical examples to ensure a thorough understanding of the concepts and methodology in addition the book addresses not just the statistical concepts researchers should be familiar with but also demonstrates their relevance to real world research questions and how to perform them using easily available software packages including r spss excel and numbers specific emphasis is on the practical application of statistics in the biological and life sciences while enhancing reader skills in identifying the research questions and testable hypotheses determining the appropriate experimental methodology and statistical analyses processing data and reporting the research outcomes in addition this book aims to develop readers skills including how to report research outcomes determine the appropriate experimental methodology and statistical analysis and identify the needed research questions and testable hypotheses includes pedagogical elements throughout that enhance the overall learning experience including case studies and tutorials all in an effort to gain full comprehension of designing an experiment considering biases and uncontrolled variables analyzing data and applying the appropriate statistical application with valid justification fills the gap between theoretically driven mathematically heavy texts and introductory step by step type books while preparing readers with the programming skills needed to carry out basic statistical tests build support figures and interpret the results provides a companion website that features related r spss excel and numbers data sets sample powerpoint lecture slides end of the chapter review questions software video tutorials that
