an earth shaking reimagining of household debt that opens up a new path to financial security for all americans american households have a debt problem the problem is not as often claimed that americans recklessly take on too much debt the problem is that us debt policies have no basis in reality weaving together the histories and trends of us debt policy with her own family story chrystin andersma debunks the myths that have long governed debt policy like the belief that

debt leads to prosperity or the claim that bad debt is the result of bad choices both of which nest in the overarching myth of a free market unhindered by government interference and accessible to all in place of these stale narratives andersma offers a compelling flexible and reality based taxonomy rooted in the internationally recognized principle of human dignity andersma s new categories of debt grounded in abolitionist principles revolutionize how policymakers are able to think about debt which will in turn revolutionize the american debt landscape itself

a rigorous pathbreaking analysis demonstrating that a country s

prosperity is directly related in the long run to the skills of its population in this book eric hanushek and ludger woessmann make a simple central claim developed with rigorous theoretical and empirical support knowledge is the key to a country's development of course every country acknowledges the importance of developing human capital but hanushek and woessmann argue that message has become distorted with politicians and researchers concentrating not on valued skills but on proxies for them the common focus is on school attainment although time in school provides a very misleading picture of how skills enter into development hanushek and woessmann contend that the cognitive skills of the population which they term the knowledge capital of a nation are essential to long run prosperity hanushek and woessmann subject their hypotheses about the relationship between cognitive skills as consistently measured by international student assessments and economic growth to a series of tests including alternate specifications different subsets of countries and econometric analysis of causal interpretations they find that their main results are remarkably robust and equally applicable to developing and developed countries they demonstrate for example that the latin american growth puzzle and the east asian miracle can be explained by these regions knowledge capital turning to the policy implications of their argument they call for an education system that develops effective accountability promotes choice and competition and provides direct rewards for good performance

products liability law second edition by prolific tort scholar mark geistfeld represents the next generation of casebooks on products liability earlier texts focused on the relative merits of strict liability and negligence embodied in the apparently competing liability frameworks of the consumer expectations test in the restatement second of torts and the risk utility test in the restatement third of torts the majority of courts however have incorporated the risk utility test into the framework of consumer expectations by providing balanced coverage of both consumer expectations and the risk utility test the casebook keeps pace with ongoing developments in the case law and moves beyond the battles that largely defined products liability in the twentieth century in addition to teaching students how liability rules protect consumer expectations via comprehensive application of the risk utility test this innovative casebook underscores the importance of doctrinal history the psychology of evaluating product risks and the role of products liability in the modern regulatory state students will

learn how courts have applied established doctrines to novel problems ranging from the relevance of scientific evidence in toxic tort cases to the distribution of defective products on the amazon online marketplace to further illustrate this dynamic the casebook has twenty nine problems with associated analysis involving the liability issues likely to be raised by the emerging technology of autonomous vehicles finally the casebook reinforces students knowledge of fundamental tort principles while developing specialized expertise and a deeper understanding of the torts process new to the second edition a dozen new main cases updating older case law providing coverage of new issues not addressed in the first edition and or improving upon the analysis provided by the associated case in the first edition retention of the majority of main cases from the first edition with revisions to the ensuing notes incorporating relevant case law developments a reorganized and updated chapter covering the controversy over the relative merits of the consumer expectations and risk utility tests comprehensive discussion of the tort version of the implied warranty the genesis of the consumer expectations test and its relation to product malfunctions and the risk utility test a new chapter addressing the existence of the tort duty and identifying the difference between patent dangers and patent defects reorganization of the chapter on factual causation emphasizing the continuity of evidentiary problems running across different types of cases ranging from the heeding presumption in warning cases to market share liability to proof of both general and specific causation in toxic tort cases professors and students will benefit from classroom tested materials taught for over 20 years by an award winning professor interesting cases that illustrate both the traditional and contemporary character of products liability litigation cases are followed by extensive

notes each chapter addressing doctrinal issues concludes with problems on autonomous vehicles the full set of 29 problems provides students with the necessary background for understanding liability issues posed by this emerging technology each problem is followed by the author's analysis of the associated issues cross referenced to the relevant casebook material
