RNA polymerase wikipedia May 22 2024

RNA polymerase is an enzyme that synthesizes RNA from a DNA template. It is a key component of the transcription process. RNA polymerase II is responsible for transcribing protein-coding genes into messenger RNA (mRNA). RNA polymerase III transcribes small RNA molecules, such as ribosomal RNA (rRNA) and transfer RNA (tRNA). RNA polymerase I transcribes ribosomal RNA (rRNA) genes.

RNA polymerase Apr 21 2024

RNA polymerase is a multi-subunit enzyme complex. In eukaryotes, there are three main types: RNA polymerase I, II, and III. RNA polymerase I is located in the nucleolus and transcribes rRNA genes. RNA polymerase II is located in the nucleoplasm and transcribes mRNA genes. RNA polymerase III is located in the nucleoplasm and transcribes tRNA and rRNA genes.

thermo fisher scientific jp Mar 20 2024

ThermoFisher Scientific is a leading provider of laboratory equipment and reagents. They offer a wide range of products for molecular biology, including DNA polymerase, RNA polymerase, and various buffers and enzymes. Their products are used in a variety of applications, including PCR, RT-PCR, and RNA sequencing.

gene expression wikipedia Feb 19 2024

Gene expression is the process by which information from a gene is used to produce a functional gene product that enables it to produce end products. This process involves the transcription of DNA into messenger RNA (mRNA) and the translation of mRNA into a protein. Gene expression is regulated by various factors, including transcription factors, enhancers, and silencers.
