this text reference book provides the most comprehensive coverage of anticholinesterase compounds organophosphates and carbamates which constitute the largest number of chemicals that are primarily used as insecticides in agriculture industry and around the home garden some ops nerve agents have been used in chemical warfare and terrorist attacks while some ops and cms have been recommended as therapeutic agents in human medicine as well as in veterinary medicine many chemicals of both classes are extremely toxic and lack selectivity thus their inadvertent accidental use continues to pose a threat to human and animal health aquatic systems and wildlife these anticholinesterase agents produce a variety of toxicological effects in target and nontarget organs in light of this complexicity this multi authored book is written by the well known scientists from many countries the book is organized into nine sections with a total of 49 chapters to provide in depth knowledge on various aspects of op and cm compounds including their use classification mechanism based toxicity and prophylactic and therapeutic measurements several chapters are written with special emphasis to cover timely topics such as chemical warfare agents physiologically based pharmacokinetic modeling structure and function of cholinesterases paraoxonase carboxylesterases developmental neurotoxicity the intermediate syndrome oxidative stress endocrine disruption and dna damage gene expression and carcinogenesis section vi with 5 chapters is specifically devoted to risk assessment and safety and regulatory guidelines for pesticides describes everything you need to know about organophosphates and carbamates extensively covers pesticides nerve agents therapeutic drugs and flame retardants describes epidemiology of the world s major disasters involving organophosphates and carbamates covers animal human aquatic and wildlife toxicity of anticholinesterases insights into in depth cholinergic and noncholinergic mechanisms of toxicity describes recent advancements in cholinesterases paraoxonases carboxylesterases oxidative stress endocrine disruption cardiac and pulmonary toxicity and carcinogenesis provides in vitro and in vivo models for neurotoxicity testing integrates knowledge of studies in lab animals and humans offers risk safety assessment and national international guidelines for permissible levels of pesticide residues describes management of anticholinesterase poisoning in humans with the advent of the safe drinking water act amendments of 1986 many water utilities are reexamining their water treatment practices upcoming new regulations on disinfection and on disinfection by products in particular are the primary driving forces for the big interest in ozone it appears that ozone with its strong disinfection capabilities and apparently lower levels of disinfection by products compared to other disinfectants may be the oxidant disinfectant of choice many utilities currently using chlorine for oxidation may need to switch due to chlorine by product concerns utilities using chloramines may need to use ozone to meet ct requirements this book prepared by 35 international experts includes current technology on the design operation and control of the ozone process within a drinking water plant it combines almost 100 years of european ozone design and operating experience with north american design operations experience and the north american regulatory and utility operational environment topics covered include ozone chemistry toxicology design consideration engineering aspects design of retrofit systems and the operation and economics of ozone technology the book contains a how to section on ozone treatability studies which explains what information can be learned using treatability studies at what scale bench pilot or demonstration plant and how this information can be used to design full scale systems it also includes valuable tips regarding important operating practices as well as guidance on retrofits and the unique issues involved with retrofitting the ozone process with ozone being one of the hottest areas of interest in drinking water this book will prove essential to all water utilities design engineers regulators and plant managers and supervisors infoworld is targeted to senior it professionals content is segmented into channels and topic centers infoworld also celebrates people companies and projects vols for 1963 include as pt 2 of the jan issue medical subject headings
