異世界に転生した青年冬夜が、神様からもらった スマートフォンを使いこなしながら、仲間たちと 冒険を繰り広げる 異世界ファンタジー 待望の第9巻

Issues in Informing Science & Information Technology, Volume 9 (2012)

2012

undeterred by his untimely death on earth 15 year old mochizuki touya continues to meander around in another world after a series of misadventures the young man has assembled a motley crew of adventurers including the timid mage linze the feisty brawler elze the ever hungry samurai yae and even the young archer yumina heir to the belfast throne together with his party and a divine white tiger touya sets his sights on the horizon heading for the demi human kingdom of mismede but all is not what it seems the beastman king issues a personal challenge

and a black scaled dragon could soon spell out touya s doom the curtains lift once again on an epic tale of sorcery smartphone apps and gunblades

In Another World With My Smartphone: Volume 2

2017-05-03

throughout the industry financial institutions seek to eliminate cumbersome authentication methods such as pins passwords and security questions as these antiquated tactics prove increasingly weak thus many organizations now aim to implement emerging technologies in an effort to validate identities with greater certainty the near instantaneous nature of online banking purchases transactions and payments puts tremendous pressure on banks to secure their operations and procedures in order to reduce the risk of human error in financial domains expert systems are seen to offer a great advantage in big data environments besides their efficiency in quantitative analysis such as profitability banking management and strategic financial planning expert systems have successfully treated qualitative issues including financial analysis investment advisories and knowledge based decision support systems due to the increase in financial applications size complexity and number of components it is no longer practical to anticipate and model all possible interactions and data processing in these applications using the traditional data processing model the emergence of new research areas is clear evidence of the rise of new demands and requirements of modern real life applications to be more intelligent this book provides an exhaustive review of the roles of expert systems within the financial sector with particular reference to big data environments in addition it offers a collection of high quality research that addresses broad challenges in both theoretical and application aspects of intelligent and expert systems in finance the book serves to aid the continued efforts of the application of intelligent systems that respond to the problem of big data processing in a smart banking and financial environment

Expert Systems in Finance

this book endeavours to highlight the untapped potential of smart agriculture for the innovation and expansion of the agriculture sector the sector shall make incremental progress as it learns from associations between data over time through artificial intelligence deep learning and internet of things applications the farming industry and smart agriculture develop from the stringent limits imposed by a farm s location which in turn has a series of related effects with respect to supply chain management food availability biodiversity farmers decision making and insurance and environmental concerns among others all of the above mentioned aspects will derive substantial benefits from the implementation of a data driven approach under the condition that the systems tools and techniques to be used have been designed to handle the volume and variety of the data to be gathered contributions to this book have been solicited with the goal of uncovering the possibilities of engaging agriculture with equipped and effective profound learning algorithms most agricultural research centres are already adopting internet of things for the monitoring of a wide range of farm services and there are significant opportunities for agriculture administration through the effective implementation of machine learning deep learning big data and iot structures

Urban climate informatics

some classes of behaviors including gambling internet gaming and sexual behaviors may lead to compulsive engagement for a minority of individuals in extreme cases where individuals may feel unable to control these behaviors without external influence these behaviors may be considered non substance or behavioral addictions many such behaviors may occur predominantly online such as gaming social media shopping and pornography and may be driven by constant accessibility via smartphone and other mobile device technologies this research topic presents diverse papers on neurobiological evidence of behavioral addictions encompassing gambling

disorder internet based disorders including internet gaming disorder and smartphone addiction and compulsive sexual behaviors

Advances in the Pathophysiology, Diagnosis, And Treatment of Dry Eye Disease

2022-06-06

artificial intelligent systems which offer great improvement in healthcare sector assisted by machine learning wireless communications data analytics cognitive computing and mobile computing provide more intelligent and convenient solutions and services with the help of the advanced techniques now a days it is possible to understand human body and to handle process the health data anytime and anywhere it is a smart healthcare system which includes patient hospital management doctors monitoring diagnosis decision making modules disease prevention to meet the challenges and problems arises in healthcare industry furthermore the advanced healthcare systems need to upgrade with new capabilities to provide human with more intelligent and professional healthcare services to further improve the quality of service and user experience to explore recent advances and disseminate state of the art techniques related to intelligent healthcare services and applications this edited book involved in designing systems that will permit the societal acceptance of ambient intelligence including signal

processing imaging computing instrumentation artificial intelligence internet of health things data analytics disease detection telemedicine and their applications as the book includes recent trends in research issues and applications the contents will be beneficial to professors researchers and engineers this book will provide support and aid to the researchers involved in designing latest advancements in communication and intelligent systems that will permit the societal acceptance of ambient intelligence this book presents the latest research being conducted on diverse topics in intelligence technologies with the goal of advancing knowledge and applications healthcare sector and to present the latest snapshot of the ongoing research as well as to shed further light on future directions in this space the aim of publishing the book is to serve for educators researchers and developers working in recent advances and upcoming technologies utilizing computational sciences

New Professionalism and the Future of Work: Interdisciplinary Perspectives on Transformations in Business-Health Relationships

2020-01-02

cognitive sciences have been involved under numerous accounts to explain how humans interact with technology as well as to design technological instruments tailored to human needs as technological advancements in fields like wearable and ubiquitous computing virtual reality robotics and artificial intelligence are presenting novel modalities for interacting with technology there are opportunities for deepening exploring and even rethinking the theoretical foundations of human technology use this volume entitled cognition and interaction from computers to smart objects and autonomous agents is a collection of articles on the impacts that novel 3 september frontiers in psychology 2019 cognition and interaction interactive technologies are producing on individuals it puts together 17 works spanning from research on social cognition in human robot interaction to studies on neural changes triggered by internet use that tackle relevant technological and theoretical issues in human computer interaction encouraging us to rethink how we conceptualize technology its use and development the volume

addresses fundamental issues at different levels the first part revolves around the biological impacts that technologies are producing on our bodies and brains the second part focuses on the psychological level exploring how our psychological characteristics may affect the way we use understand and perceive technology as well as how technology is changing our cognition the third part addresses relevant theoretical problems presenting reflections that aim to reframe how we conceptualize ourselves technology and interaction itself finally the last part of the volume pays attention to the factors involved in the design of technological artifacts providing suggestions on how we can develop novel technologies closer to human needs overall it appears that human computer interaction will have to face a variety of challenges to account for the rapid changes we are witnessing in the current technology landscape

if everyone with a smartphone can be a citizen photojournalist who needs professional photojournalism this rather flippant question cuts to the heart of a set of pressing issues where an array of impassioned voices may be heard in vigorous debate while some of these voices are confidently predicting photojournalism s impending demise as the latest casualty of

internet driven convergence others are heralding its dramatic rebirth pointing to the democratisation of what was once the exclusive domain of the professional regardless of where one is situated in relation to these stark polarities however it is readily apparent that photojournalism is being decisively transformed across shifting uneven conditions for civic participation in ways that raise important questions for journalism s forms and practices in a digital era this book s contributors identify and critique a range of factors currently recasting photojournalism s professional ethos devoting particular attention to the challenges posed by the rise of citizen journalism this book was originally published as two special issues in digital journalism and journalism practice

Computational Intelligence in Healthcare

2021-05-11

recent years have seen important developments in the computer and game industry including the emergence of the concept of serious games it is hypothesized that tools such as games virtual reality or applications for smartphones may foster learning enhance motivation promote behavioral change support psychotherapy favor empowerment and improve some cognitive functions computers and games may create supports for training or help people with cognitive emotional or behavioral change games take various formats from board games to informatics to games with interactive rules of play similarly computer tools may vary widely in format from self help or assisted computerized training to virtual reality or applications for smartphones some tools that may be helpful for mental health were specifically designed for that goal whereas others were not gamification of computer related products and games with a numeric format tend to reduce the gap between games and computers tools and increase the conceptual synergy in such fields games and computer design share an opportunity for creativity and innovation to help create specifically design and assess preventive or therapeutic tools computers and games share a design conception that allows innovative approaches to overcome barriers of the real world by creating their own rules yet despite the potential interest in such tools to improve treatment of mental disorders and to help prevent them the field remains understudied and information is under disseminated in clinical practice some studies have shown however that there is potential interest and acceptability of tools that support various vehicles rationales objectives and formats these tools include traditional games e g chess games popular electronic games board games computer based interventions specifically designed for psychotherapy or cognitive training virtual reality apps for smartphones and so forth computers and games may offer a true opportunity to develop assess and disseminate new prevention and treatment tools for mental health and well being currently there is a strong need for state of the art information to answer questions such as the following why develop such tools for mental health and well being what are the potential additions to traditional treatments what are the best strategies or formats to improve the possible impact of these tools are such tools useful as a first treatment step what is the potential of a hybrid model

of care that combines traditional approaches with games and or computers as tools what games and applications have already been designed and studied what is the evidence from previous studies how can such tools be successfully designed for mental health and well being what is rewarding or attractive for patients in using such treatments what are the worldwide developments in the field are some protocols under development what are the barriers and challenges related to such developments how can these tools be assessed and how can the way that they work and for whom be measured are the potential benefits of such products specific or can these additions be attributed to nonspecific factors what are the users views on such tools what are the possible links between such tools and social networks is there a gap between evidence based results and market development are there any quality challenges what future developments and studies are needed in the field

dyadic coping is a concept that has reached increased attention in psychological science within the last 20 years dyadic coping conceptualizes the way couples cope with stress together in sharing appraisals of demands planning together how to deal with the stressors and engage in supportive or joint dyadic coping among the different theories of dyadic coping the systemic transactional model stm bodenmann 1995 1997 2005 has been applied to many studies on couples coping with stress while a recent meta analysis shows that dyadiccoping is a robust and consistent predictor of relationship satisfaction and couple s functioning in community samples some studies also reveal the significance of dyadic coping in dealing with

psychological disorders e g depression anxiety or severe illness e g cancer diabetes copd etc researchers all over the world build their research on this or other concepts of dyadic coping and many typically use the dyadic coping inventory dci for assessing dyadic coping so far research on dyadic coping has been systematically presented in two books one written by revenson kayser bodenmann in 2005 focussing on emerging perspectives on couples coping the other by falconier randall bodenmann more recently in 2016 addressing intercultural aspects of dyadic coping in african american asian and european couples this ebook gives an insight into recent dyadic coping research in different areas and countries
