turned to indicators based on student test scores to evaluate teachers and schools as well as students themselves the focus thus far has been on test scores in those subject areas where there is a sequence of consecutive tests such as in mathematics or english language arts with a focus on grades 4 8 teachers in these subject areas however constitute less than thirty percent of the teacher workforce in a district comparatively little has been written about the measurement of achievement in the other grades and subjects this volume seeks to remedy this imbalance by focusing on the assessment of student achievement in a broad range of grade levels and subject areas with particular attention to their use in the evaluation of teachers and schools in all it addresses traditional end of course tests as well as alternative measures such as portfolios exhibitions and student learning objectives in each case issues related to design and development psychometric considerations and validity challenges are covered from both a generic and a content specific perspective the ncme applications of educational measurement and assessment series includes edited volumes designed to inform research based applications of educational measurement and assessment edited by leading experts these books are comprehensive and practical resources on the latest developments in the field the ncme series editorial board is comprised of michael j kolen chair robert l brennan wayne camara edward h haertel suzanne lane and rebecca zwick

this book collects together lectures by some of the leaders in the field of partial differential equations and geometric measure theory it features a wide variety of research topics in which a crucial role is played by the interaction of fine analytic techniques and deep geometric observations combining the intuitive and geometric aspects of mathematics with analytical ideas and variational methods the problems addressed are challenging and complex and often require the use of several refined techniques to overcome the major difficulties encountered the lectures given during the course partial differential equations and geometric measure theory in cetraro june 2 7 2014 should help to encourage further research in the area the enthusiasm of the speakers and the participants of this cime course is reflected in the text

this book brings together a collection of research based papers on current issues in early childhood mathematics education that were presented in the topic study group 1 tsg 1 at the 13th international congress on mathematical education icme 13 held at the university of hamburg in 2016 it will help readers understand a range of key issues that early childhood mathematics educators encounter today research on early childhood mathematics education has grown in recent years due in part to the well documented positive relation between children s early mathematical knowledge and their later mathematics learning and to the considerable emphasis many countries are now placing on preschool education the book addresses a number of central questions including what is mathematical structural development and how can we promote it in early childhood how can multimodality and embodiment contribute to early mathematics learning and to acquiring a better understanding of young children s mathematical development how can children s informal mathematics related experiences affect instruction and children s learning in different mathematics content areas what is the role of tools including technology and picture books in supporting early mathematics learning what are the challenges in early childhood mathematics education for teachers education and professional development

this book constitutes the refereed proceedings of the 17th international conference on integer programming and combinatorial optimization ipco 2014 held in bonn germany in june 2014 the 34 full papers presented were carefully reviewed and selected from 143 submissions the conference is a forum for researchers and practitioners working on various aspects of integer programming and combinatorial optimization the aim is to present recent developments in theory computation and applications in these areas the scope of ipco is viewed in a broad sense to include algorithmic and structural results in integer programming and combinatorial optimization as well as revealing computational studies and novel applications of discrete optimization to practical problems

Contemporary Research and Perspectives on Early Childhood Mathematics Education

this book presents a research focus on diversity and inclusivity in mathematics education the challenge of diversity largely in terms of student profiles or contextual features is endemic in mathematics education and is often argued to require differentiation as a response typically different curricula text materials

task structures or pedagogies are favoured responses but huge differences in achievement still result if we in mathematics education seek to challenge that status quo more research must be focussed not just on diversity but also on the inclusivity of practices in mathematics education the book is written by a group of experienced collaborating researchers who share this focus it is written for researchers research students teachers and in service professionals who recognise both the challenges but also the opportunities of creating and evaluating new inclusive approaches to curriculum and pedagogy ones that take for granted the positive values of diversity several chapters report new research in this direction the authors are part of or have visited with the mathematics education staff of the faculty of education at monash university in melbourne australia the chapters all focus on the ideas of development in both research and practice recognising that the current need is for new inclusive approaches the studies presented are set in different contexts including australia china the united states and singapore

the purpose of this open access compendium written by experienced researchers in mathematics education is to serve as a resource for early career researchers in furthering their knowledge of the state of the field and disseminating their research through publishing to accomplish this the book is split into four sections empirical methods important mathematics education themes academic writing and academic publishing and a section looking ahead the chapters are based on workshops that were presented in the early career researcher day at the 13th international congress on mathematical education icme 13 the combination of presentations on methodological approaches and theoretical perspectives shaping the field in mathematics education research as well as the strong emphasis on academic writing

and publishing offered strong insight into the theoretical and empirical bases of research in mathematics education for early career researchers in this field based on these presentations the book provides a state of the art overview of important theories from mathematics education and the broad variety of empirical approaches currently widely used in mathematics education research this compendium supports early career researchers in selecting adequate theoretical approaches and adopting the most appropriate methodological approaches for their own research furthermore it helps early career researchers in mathematics education to avoid common pitfalls and problems while writing up their research and it provides them with an overview of the most important journals for research in mathematics education helping them to select the right venue for publishing and disseminating their work

this comprehensive presentation of the integral equation method as applied to electro analytical experiments is suitable for electrochemists mathematicians and industrial chemists the discussion focuses on how integral equations can be derived for various kinds of electroanalytical models the book begins with models independent of spatial coordinates goes on to address models in one dimensional space geometry and ends with models dependent on two spatial coordinates bieniasz considers both semi infinite and finite spatial domains as well as ways to deal with diffusion convection homogeneous reactions adsorbed reactants and ohmic drops bieniasz also discusses mathematical characteristics of the integral equations in the wider context of integral equations known in mathematics part of the book is devoted to the solution methodology for the integral equations as analytical solutions are rarely possible attention is paid mostly to numerical methods and relevant software this book includes examples taken from the literature and a thorough literature overview with emphasis on crucial aspects of the integral equation methodology

the theory of numbers continues to occupy a central place in modern mathematics because of both its long history over many centuries as well as its many diverse applications to other fields such as discrete mathematics cryptography and coding theory the proof by andrew wiles with richard taylor of fermat s last theorem published in 1995 illustrates the high level of difficulty of problems encountered in number theoretic research as well as the usefulness of the new ideas arising from its proof the thirteenth conference of the canadian number theory association was held at carleton university ottawa ontario canada from june 16 to 20 2014 ninety nine talks were presented at the conference on the theme of advances in the theory of numbers topics of the talks reflected the diversity of current trends and activities in modern number theory these topics included modular forms hypergeometric functions elliptic curves distribution of prime numbers diophantine equations l functions diophantine approximation and many more this volume contains some of the papers presented at the conference all papers were refereed the high quality of the articles and their contribution to current research directions make this volume a must for any mathematics library and is particularly relevant to researchers and graduate students with an interest in number theory the editors hope that this volume will serve as both a resource and an inspiration to future generations of researchers in the theory of numbers

elementary mathematical models offers instructors an alternative to standard college algebra quantitative literacy and liberal arts mathematics courses presuming only a background of exposure to high school algebra the text introduces students to the

methodology of mathematical modeling which plays a role in nearly all real applications of mathematics a course based on this text would have as its primary goal preparing students to be competent consumers of mathematical modeling in their future studies such a course would also provide students with an understanding of the modeling process and a facility with much of the standard non trigonometric content of college algebra and precalculus this book builds successively a series of growth models defined in terms of simple recursive patterns of change corresponding to arithmetic quadratic geometric and logistic growth students discover and come to understand linear polynomial exponential and logarithmic functions in the context of analyzing these models of intrinsically and scientifically interesting phenomena including polar ice extent antibiotic resistance and viral internet videos students gain a deep appreciation for the power and limitations of mathematical modeling in the physical life and social sciences as questions of modeling methodology are carefully and constantly addressed realistic examples are used consistently throughout the text and every topic is illustrated with models that are constructed from and compared to real data the text is extremely attractive and the exposition is extraordinarily clear the lead author of this text is the recipient of nine maa awards for expository writing including the ford evans pólya and allendoerfer awards and the beckenbach book prize great care has been taken by accomplished expositors to make the book readable by students those students will also benefit from more than 1 000 carefully crafted exercises

this book explores the issue of consumer financial education responding to increased interest in and calls to improve peoples financial literacy skills and abilities to understand and manage their money new conceptual frameworks introduced in the book offer academic audiences an innovative way of thinking about the project on financial literacy education using the concepts of edu regulation and financial knowledge democratisation to analyse the financial education project in the uk the book exposes serious and often ignored limitations to using information and education as tools for consumer protection it challenges the mainstream representation of financial literacy education as a viable solution to consumer financial exclusion and poverty instead it argues that the project on financial literacy education fails to acknowledge important dependences between consumer financial behaviour and the socio economic political and cultural context within which consumers live finally it reveals how these international and national calls for ever greater financial education oversimplify and underestimate the complexity of consumer financial decision making in our modern times
