The Value of a Dollar

1999

the last twenty years have seen dramatic changes in china as the country has moved from a centrally controlled communist state to a socialist market economy a major contribution to this process has been the development design and construction of projects for foreign investment joint venture companies to provide the buildings and infrastructure needed for modernisation of the economy the foreign investor will often require

overseas designers specialist contractors and suppliers to work in conjunction with local organisations on these projects to operate effectively with the local industry foreign organisations will have to develop an understanding of the background to the construction industry in china and familiarise themselves with the local construction process this book aims to help foreign contributors to china s continuing economic development to gain a basic knowledge of these matters by presenting a broad picture of building in china and the system within which they will operate more specifically it looks at how a foreign party to a joint venture in china should go about the business of commissioning designing and constructing their buildings

this book discusses recent advances in our understanding of the role of oxidants in microbial pathophysiology providing valuable insights into the complex role of reactive oxygen species ros in host microbial interactions the various chapters take readers through the function of ros in infections ranging from viral to bacterial and describe how microorganisms have developed complex strategies to not only avoid contact with phagocyte derived oxidants but also protect themselves from injury when oxidants are encountered featuring the latest research in the field of microbial diseases this timely book is a ready reference for scientists looking to develop new anti microbial drugs

the land warrior lw system is the army s future system for the individual soldier the lw consists of five subsystems with the weapon subsystem the focus of the training research the training of two platoons in preparation for a lw operational test was observed four sights and devices were trained the close combat optic two aiming lights and the thermal weapon sight plus a bore light the training adequately prepared the soldiers to qualify on the m4 carbine with the close combat optic and the thermal weapon sight qualification standards were extremely difficult to achieve with the aiming lights on the m4 due to environmental conditions typical of army ranges not to lack of firer expertise a standardized technique for boresighting all the devices was developed diagnostic skills needed by trainers and soldiers to effectively hit targets with each device were identified the findings have immediate applicability to the army as the devices are currently being fielded the report describes what contributes to quality training on the devices and what should be integrated into marksmanship programs of instruction technical manuals and the training and doctrine literature stinet

the geostationary ring practice and law by martha mejía kaiser addresses numerous physical aspects of this highly sought after orbital region and analyses in unprecedented detail the evolution of its use coordination and related disputes and efforts to keep it operational by clearing it of space debris

Corneal Surgery

1999

Corneal surgery is a complex procedure that involves the removal of the cornea and its replacement with a donor cornea. This process is often necessary for patients with severe corneal disease or injury. The procedure is performed in a specialized surgical setting and requires a team of experienced surgeons and support staff. The success of the surgery depends on several factors, including the quality of the donor cornea and the skill of the surgeon. Post-operative care is also crucial for a successful outcome. The procedure is typically performed on an outpatient basis, and patients are usually able to return home the same day. The recovery period can be long, and patients may experience some discomfort and vision changes during this time. However, with proper care and follow-up, most patients achieve a significant improvement in their vision and quality of life.

as an addition to the european postgraduate training system for young neurosurgeons we began to publish in 1974 this series of advances and technical standards in neurosurgery which was later sponsored by the european association of neurosurgical societies this series was first discussed in 1972 at a combined meeting of the italian and german neurosurgical societies in taormina the founding fathers of the series being jean brihaye bernard pertuiset fritz loew and hugo krayenbühl thus were established the principles of european cooperation which have been born from the european spirit flourished in the european association and have throughout been associated with this series the fact that the english language is well on the way to becoming the international medium at european scientific conferences is a great asset in terms of mutual understanding therefore we have decided to publish all contributions in english regardless of the native language of the authors all contributions are submitted to the entire editorial board before publication of any volume our series is not intended to compete with the publications of original scientific papers in other neurosurgical journals our intention is rather to present fields of neurosurgery and related areas in which important recent advances have been made the contributions are written by specialists in the given fields and constitute the first part of each volume

ecology and economics have greek roots in oikos for household logos for study and nomics for management

thus ecology and economics should have complemented one another for a proper growth and development without destruction but unfortunately rapid industrialization lure for fast financial gains and commercialization activities have led to a widespread surge in pollution load environmental degradation habitat destruction rapid loss of biodiversity sudden rise in rate of extinction of many wildlife and wild relatives of domesticated animals and cultivated cereals and other plants global climate changes creating global rise in temperature and CO₂ levels and increased ultraviolet B at ground level although these threats to human health have led us to look to ecology for their solutions and guidance for sustainable development without destruction the industrial and technology houses are looking for alternative methods of development and resource use methods the two global conferences of the United Nations in 1972 and 1992 and international programs of man and the biosphere MAB International Biological Program IBP International Geosphere Biosphere Program IGBP and World Conservation Union IUCN of different commissions United Nations Environmental Program UNEP efforts Ramsar Conventions for wetlands and World Wide Fund for Nature WWF for nature in general and wildlife in particular have focused attention of ecologists naturalists governments and non governmental organizations NGOs toward better conservation

2011-09-07

Caroline Hébert and a panel of key experimentalists and clinical investigators comprehensively review the state of the art in the chemokine field ranging from the effects of chemokines and their receptors in retroviral infections to their role in inflammation angiogenesis angiostasis and tumor cell biology the book examines in detail fifteen recently identified chemokines and elucidates the role of chemokine function in vivo from animal experiments animal models are also used to explore how chemokines operate in a variety of chronic and acute
