in the period from the 1920s to 1930s the theory of economic cycles underwent dramatic changes due to the research of such famous economists as nikolay kondratieff joseph kitchin wesley mitchell simon kuznets and joseph schumpeter the idea of a whole system of economic cycles with characteristic periods between two and sixty years was developed the idea of a system of intertwined economic cycles is nowadays paramount to the school of evolutionary economics and its development promises rather interesting future outcomes that is why this issue of our kondratieff waves yearbook is devoted to the interconnections between various economic cycles as to the subtitle of this volume one should note that many of the contributors refer to the system of cycles and the fact that real economic cycles make up a system whereas among different types of cycles the juglar kuznets and kondratieff cycles are the most important ones for the present day economic dynamics although kondratieff himself considered long waves as above all an economic phenomenon the theory of the long waves became however very actively developed in connection with their political and geopolitical aspects in this yearbook the political aspect of kondratieff waves is the subject of several articles in the second section the last section of this yearbook is devoted to the heritage of kondratieff and other prominent economists the year 2015

though the history of hikes in petroleum prices began in 1973 when the military government of gen yakubu gowon increased the price of petrol to 9 kobo per litre from the equivalent of 8 8 kobo that had prevailed before then the politics and economics of removal of subsidies on premium petroleum products entered into the national lexicon in 1986 when the military administration of general ibrahim babangida announced that due to the devaluation of the naira the domestic price

this new monograph provides a stimulating new take on hotly contested topics in world modernization and the globalizing economy it begins by situating what is called the great divergence the social technological revolution that led european nations to outpace the early dominance of asia in historical context over centuries this is contrasted with an equally powerful great convergence the recent economic and technological expansion taking place in third world nations and

characterized by narrowing inequity among nations they are seen here as two phases of an inevitable global process centuries in the making with the potential for both positive and negative results this sophisticated presentation examines why the developing world is growing more rapidly than the developed world how this development began occurring under the western world s radar how former colonies of major powers grew to drive the world s economy why so many western economists have been slow to recognize the great convergence the increasing risk of geopolitical instability why the world is likely to find itself without an absolute leader after the end of the american hegemony a work of rare scope great divergence and great convergence gives sociologists global economists demographers and global historians a deeper understanding of the broader movement of social and economic history combined with a long view of history as it is currently being made it also offers some thrilling forecasts for global development in the forthcoming decades
