the book consists of two parts the first part consists of seven chapters and presents a new software for package maple of releases 6 10 the tools represented in this chapters increase the range and efficiency of use of maple on windows platform the basic attention is devoted to additional tools created in the process of practical use and testing the maple of releases 4 10 which by some parameters extend essentially the opportunities of the package and facilitate the work with it whereas the algorithms of physical and engineering problems of the second part mainly use the finite element method fem the part consists of eight chapters and solves in maple environment the physical and engineering problems from such fields as thermal conductivity of deformable bodies the

hydrodynamics hydromechanics etc at last application of maple for solution of optimization problems is presented

there is nothing quite like that feeling you get when you see that look of recognition and enjoyment on your students faces not just the strong ones but everyone is nodding in agreement during your first explanation of the geometry of directional derivatives if you have incorporated animated demonstrations into your teaching you know how effective they can be in eliciting this kind of response you know the value of giving students vivid moving images to tie to concepts but learning to make animations generally requires extensive searching through a vast computer algebra system for the pertinent functions maple animation brings together virtually all of the functions and procedures useful in creating sophisticated animations using maple 7 8 or 9 and it presents them in a logical accessible way the accompanying downloadable resources provide all of the maple code used in the book including the code for more than 30 ready to use demonstrations from newton s method to linear transformations the complete animations included in this book allow you to use them straight out of the box careful explanations of the methods teach you how to implement your own creative ideas whether you are a novice or an experienced maple user
