played in space since the early days of the space race world wide in scope and focusing on the second half of the 20th century this work provides biographies and discographies of some 500 composers and conductors of light and popular orchestral music including film show theatre and mood music the book is arranged in two sequences 1 biographies and select discographies both arranged alphabetically of the well known and better known conductors and composers these entries also include a list of suggested reading for those wishing to further their studies and 2 select discographies of conductors about whom little or no biographical information is available the bibliography at the end of the book covers discographical sources popular music and film music this is the first time that the lives and recordings of such artists as kostelanetz faith and gould as well as the orchestral recordings of such great popular composers as gershwin kern porter rogers berlin and coward have been documented and presented in an encyclopedic form book by stephen gislason emerged from his music notes collected over many years the topics cover a wide range of interests from the history of instruments music theory composing to the most current technologies involved in music composition and sound recording a special chapter on the musical brain explains current knowledge in the brain processing of sound as it applies to language and music decoding a chapter on the music business reviews the dramatic changes in music marketed and discusses some of the dilemmas and controversies facing musicians preface this book emerged from

notes i have kept for several decades i have spent much time studying music theory electronics applied to sound reproduction and to performance skills i decided to assemble my music notes so that any person interested in music could benefit from simple clear explanations music descriptions often are too complicated and the use of terms can be inconsistent and confusing as with other subjects i have tackled i assumed that with a little extra effort more precise descriptions would be welcomed by readers seeking a practical understanding of music the book begins with a consideration of what sound is and how animals use sounds to communicate music is not a human invention but we do elaborate sound communication more than other animals in our production of both speech and musical performances the discussion continues with noise an important topic that is poorly understood a well informed musician will refrain from making noise and understand ambrose bierce when he stated of all noise music is the less offensive i include acoustic and electronic instruments in my discussions of music creation in my world electronics dominate every aspect of work and play and most music i create and listen to was created stored and distributed electronically the art and science of recording is an important study for all 21st century musicians increased sophistication about the nature of sound the art of combining musical sounds and the effect on the listener s brain are all required for music to advance beyond noise toward a more effective means of human communication stephen gislason 2016

virginia woolf famously claimed that around december 1910 human character changed aesthetic technologies addresses how music especially opera the phonograph and film served as cultural agents facilitating the many extraordinary social artistic and cultural shifts that characterized the new century and much of what followed

long thereafter even to the present three tropes are central the tensions and traumas—cultural social and personal—associated with modernity changes in human subjectivity and its engagement and representation in music and film and the more general societal impact of modern media sound recording the development of the phonograph in particular and the critical role played by early century opera recording a principal focus of the book is the conflicted relationship in western modernity to nature particularly as nature is perceived in opposition to culture and articulated through music film and sound as agents of fundamental sometimes shocking transformation the book considers the sound vision world of modernity filtered through the lens of aesthetic modernism and rapid technological change and the impact of both experienced with the prescient sense that there could be no turning back

book by stephen gislason emerged from his music notes collected over many years the topics cover a wide range of interests from the history of instruments music theory composing to the most current technologies involved in music composition and sound recording a special chapter on the musical brain explains current knowledge in the brain processing of sound as it applies to language and music decoding a chapter on the music business reviews the dramatic changes in music marketed and discusses some of the dilemmas and controversies facing musicians preface this book emerged from notes i have kept for several decades i have spent much time studying music theory electronics applied to sound reproduction and to performance skills i decided to assemble my

music notes so that any person interested in music could benefit from simple clear explanations music descriptions often are too complicated and the use of terms can be inconsistent and confusing as with other subjects i have tackled i assumed that with a little extra effort more precise descriptions would be welcomed by readers seeking a practical understanding of music the book begins with a consideration of what sound is and how animals use sounds to communicate music is not a human invention but we do elaborate sound communication more than other animals in our production of both speech and musical performances the discussion continues with noise an important topic that is poorly understood a well informed musician will refrain from making noise and understand ambrose bierce when he stated of all noise music is the less offensive i include acoustic and electronic instruments in my discussions of music creation in my world electronics dominate every aspect of work and play and most music i create and listen to was created stored and distributed electronically the art and science of recording is an important study for all 21st century musicians increased sophistication about the nature of sound the art of combining musical sounds and the effect on the listener s brain are all required for music to advance beyond noise toward a more effective means of human communication stephen gislason 2016
