*Microbial Bioprocesses* 2024-03-04 microbial processes are involved in food chemical pharmaceutical cosmetics energy and new material industries over the past 2 decades new or more efficient industrial processes involving microorganisms have been launched yielding purer less expensive products or substances not available using classical chemical methods microbial bioprocesses aims to give an overview of established and successful processes and discusses the trends and perspectives in industrial microbiology which along with tremendous progress in genetic and metabolic engineering in recent years are once again becoming an area of innovation and emerging technologies microbial bioprocesses covers the unique areas like microbial volatiles mvocs microbial bioinoculant development bacterial nanocelluloses production and processes for remediation by fungi and actinobacteria provides an innovative description of emerging bioprocesses for biotechnological gains provides a broad cross section of microbial bioprocess that covers several sustainability applications gives general insights about how microorganisms can be utilized in production of various chemicals

*From GWAS Hits to Treatment Targets* 2020-02-20 genome wide association gwa studies as a prototype of large scale omics studies have advanced our understanding of the genetic basis

of many common diseases with respect to coronary artery disease cad and cardiovascular risk factors like lipids blood pressure or bmi they have identified hundreds of chromosomal loci that modulate disease risk despite their scientific success gwa studies have been criticized for having failed so far in delivering diagnostically or therapeutically relevant products however the ability to achieve such goals has been strengthened recently by further layers of omics based data including large scale transcriptomics data and better annotation of regulatory sequences and epigenetic changes in the genome e g through the encode project as well as novel tools for bioinformatics analysis allowing a systems medicine based approach to be applied all in all the last decade with its gold rush of genomic discovery led to the identification of known and novel pathways involved in the pathogenesis of cardiovascular diseases and point to novel treatment targets this research topic has gathered contributions from scientists working in the field of cardiovascular genetics who have common interests in understanding the pathomechanisms linking genetic association findings and disease to finally translate the findings from large scale genetic studies into novel treatment options
