## ***Encyclopedia of Chemical Physics and Physical Chemistry 2023-07-03***

the encyclopedia of physical chemistry and chemical physics introduces possibly unfamiliar areas explains important experimental and computational techniques and describes modern endeavors the encyclopedia quickly provides the basics defines the scope of each subdiscipline and indicates where to go for a more complete and detailed explanation particular attention has been paid to symbols and abbreviations to make this a user friendly encyclopedia care has been taken to ensure that the reading level is suitable for the trained chemist or physicist the encyclopedia is divided in three major sections fundamentals the mechanics of atoms and molecules and their interactions the macroscopic and statistical description of systems at equilibrium and the basic ways of treating reacting systems the contributions in this section assume a somewhat less sophisticated audience than the two subsequent sections at least a portion of each article inevitably covers material that might also be found in a modern undergraduate physical chemistry text methods the instrumentation and

fundamental theory employed in the major spectroscopic techniques the experimental means for characterizing materials the instrumentation and basic theory employed in the study of chemical kinetics and the computational techniques used to predict the static and dynamic properties of materials applications specific topics of current interest and intensive research for the practicing physicist or chemist this encyclopedia is the place to start when confronted with a new problem or when the techniques of an unfamiliar area might be exploited for a graduate student in chemistry or physics the encyclopedia gives a synopsis of the basics and an overview of the range of activities in which physical principles are applied to chemical problems it will lead any of these groups to the salient points of a new field as rapidly as possible and gives pointers as to where to read about the topic in more detail

the nato arw in irkutsk was an excellent occasion for the coming together of eastern and western scientists who are involved in tropospheric science the workshop has greatly contributed to the scientific and social understanding among the participants from the many different countries many new personal contacts were made which will help to strengthen future collaborations in particular the lake baikal area and the limnological institute offer splendid opportunities for environmental research which in part is already on going for most participants it was the first time to see the impressive nature of the lake baikal region hopefully there will be a chance for a follow up event in siberia where researchers from the east and west can again meet and engage in fruitful scientific dialogue the book contains extended abstracts of the lectures and the poster presentations presented at the nato arw global atmospheric change and its impact on regional air quality irkutsk lake baikal russian federation august 21 27 2001 the arw was composed of 22 oral presentations by key lecturers and 6 additional shorter oral presentations from participants in a special poster session the 36 poster contributions were presented and discussed unfortunately not all contributors submitted extended abstracts however to compensate two contributions have been added from 2 participants

who were originally invited but were unable to attend

besides typical effects on matter the application of high pressure techniques to existing research methods were to be treated as well as pressure effects on reaction rates and equilibria according to the concept of the advanced study institute program the summer school proceedings were meant to be a high level teaching activity it was emphasized that the contributions should have the character of surveys rather than of highly specialized reports on recent research results now following the successful completion of the summer school which involved very close cooperation with my colleagues during its preparation it is my sincere wish to thank all the lecturers and contributors to this volume for the extreme care they used in preparing the lectures and manuscripts i am especially grateful to the members of the organizing committee for their valuable assistance finally the financial support of the scientific affairs division of the north atlantic treaty organization is equally appreciated by participants and organizers of the advanced study institute

this book represents a collection of lectures presented at the nato advanced study institute asi on chemistry physics of the molecular processes in energetic materials held at hotel torre normanna altavilla milicia sicily italy september 3 to 15 1989 the institute was attended by seventy participants including twenty lecturers drawn from thirteen countries the purpose of the institute was to review the major advances made in recent years in the theoretical and experimental aspects of explosives and propellants in accordance with the format of the nato asi it was arranged to have a relatively small number of speakers to present in depth review type lectures emphasizing the basic research aspects of the subject over a two week period most of the speakers gave two lectures each in excess of one hour with additional time for discussions the scope of the meeting was limited to molecular and spectroscopic studies since

the hydro dynamic aspects of detonation and various performance criteria of energetic materials are often covered adequately in other international meetings an attempt was made to have a coherent presentation of various theoretical computational and spectroscopic approaches to help a better understanding of energetic materials from a molecular point of view the progress already made in these areas is such that structure property e g
