in a right triangle the side that is opposite of the 90 angle is the longest side of the triangle and is called the hypotenuse the sides of a right triangle are commonly referred to with the variables a b and c where c is the hypotenuse and a and b are the lengths of the shorter sides

## **mean proportionals in right triangles notebook geo**

Aug 13 2022

the leg of a right triangle is the mean proportional between the hypotenuse and the projection of the leg on the hypotenuse the projection of a leg is that segment of the hypotenuse which is adjacent to the leg a projection is formed by dropping a perpendicular from the end of the segment leg to the hypotenuse
