the biochemistry basics biochemistry and molecular biology study guide was created by a renowned student from the university of florida and includes all notes diagrams and study guides for all the important subjects covered in biochemistry molecular biology genetics and microbiology milin kurup is a double major in b s microbiology and cognitive and behavioral neuroscience student from the university of florida in addition to his degree milin is a uf biochemistry bch4024 study instructor group leader a microbiology mcb30201 teaching assistant a genetics pcb4522 teaching assistant and a neuroscience research assistant at the university of florida while many of these classes cover high density material this study guide hopes to organize and condense the whole curriculum into short page review sheets in the author s time of instruction and study he organized a collection of all reactions mechanisms processes and concepts all studied in biochemistry genetics and microbiology overall this biochemistry study guide covers topics such as biomolecule structures protein carbohydrate nucleic acids and lipids biomolecules function biomolecule metabolism protein metabolism carbohydrate metabolism nucleic acid metabolism and lipid metabolism physiological biochemical relationships genetics and biological microbiological biochemical processes overall the guide is organized into 1 3 page summaries of each specific topic and acts as a study guide for those who hope to study individual concepts in detail all sections include detailed diagrams color coded notes labeled illustration and detailed descriptions for effective comprehension in addition to class studies many students also have used this study guide

as an mcats review guide the short and condensed review pages have helped many students organize and categorize important topics as they continue to study for the mcats ultimately this organized set can be extremely useful for students review especially before class exams school projects standardized test and much more

this general organic and biochemistry text has been written for students preparing for careers in health related fields such as nursing dental hygiene nutrition medical technology and occupational therapy it is also suited for students majoring in other fields where it is important to have an understanding of the basics of chemistry students need have no previous background in chemistry but should possess basic math skills raymond was crafted to take advantage of recent trends in the job market it is a shorter lighter book with a new integrated table of contents that develops general organic and biochemistry topics together rather than in isolation in introducing job material this text uses an integrated approach in which related general chemistry organic chemistry and biochemistry topics are presented in adjacent chapters this approach helps students see the strong connections that exist between these three branches of chemistry and allows instructors to discuss these interrelationships while the material is still fresh in students minds this integration involves the following sets of chapters chapter 3 compounds and chapter 4 an introduction to organic compounds an introduction to bonding and compounds is followed by a look at the members of a few key organic families chapters 3 4 and 6 reactions a study of inorganic and organic compounds is followed after a look at gases

liquids and solids in chapter 5 by an introduction to their reactions chapter 7 solutions and chapter 8 lipids and membranes a discussion of solubility is followed by a look at the importance of solubility in biochemistry some reactions from chapter 6 are reintroduced chapter 9 acids and bases and chapter 10 carboxylic acids phenols and amines principles of acid base chemistry from an inorganic perspective are followed by a chapter on the organic and biochemical aspects of this topic chapter 11 alcohols aldehydes and ketones and chapter 12 carbohydrates an introduction to the chemistry of alcohols aldehydes and ketones is followed by a presentation of related biochemical applications

the conversational science series is a new or at least different approach to preparing for the latest version of the medical college admissions test this bit is only my personal opinion but i think the easiest way to do well on the mcat is to understand the material there s one heck of a lot of material though so how should you study the things you ve already covered in class this study guide is written in an informal tone of voice because you and i are having a conversation and not a lecture this study guide contains a limited number of crudely drawn figures you re the person studying for the exam so i ask you to draw the rest of the figures for yourself a figure that you draw yourself even if

you have no artistic talent whatsoever teaches you much more than you can learn by simply looking at the beautiful full color professionally drawn figures in your textbooks this study guide has a limited number of review questions so you can check if you really did understand one chapter before you move on to the next this study guide does not contain any practice exams this is because in my opinion again based on my experience as a student and as an instructor the questions in the practice exams of many study guides are too often confusing poorly written and not at all like the actual questions on the actual exam and sometimes the answers given for some questions on some practice exams are just plain wrong this study guide may not be for everyone but i think there s a good chance it ll help you convince yourself that you really do understand the material medical college admissions test mcat and mcat2015 are registered trademarks of the association of american medical colleges which neither sponsors nor endorses this product i took the mcat way back in the middle of the 1980s and i did very well if i do say so myself

rodney boyer s text gives students a modern view of biochemistry he utilizes a contemporary approach organized around the theme of nucleic acids as central molecules of biochemistry with other biomolecules and biological processes treated as direct or indirect products of the nucleic acids the topical coverage usually provided in current biochemistry courses is all present only the sense of focus and balance of coverage has been modified the result is a text of exceptional relevance for students in allied health fields agricultural studies and related disciplines
