this volume is a compilation of reviews on the industrial usage of soil microorganisms the contents include 16 brief reviews on different soil microbe assisted industrial processes readers will be updated about recent applications of soil bacteria fungi and algae in sectors such as agriculture biotechnology environmental management the reviews also cover special topics like sustainable agriculture biodiversity ecology and intellectual property rights of patented strains giving a broad perspective on industrial applications of soil microbes volume 2 includes reviews on destructive microbes like macrophomina phaseolina ecofriendly microbes like beauveria bassiana the identification of fungi in the rhizosphere the industrial application of trichoderma and other topics the text is easy to understand for readers of all levels with references provided for the benefit of advanced readers

A New Textbook for Nurses in India vol1.,5/e 2013-06-10

this contributed volume provides insights into multiple applications using microbes to promote productivity in agriculture to produce biochemicals or to respond to challenges in biomedicine it highlights the microbial production of nanocompounds with medical functionality alongside new anti mycobacterial strategies and introduces plant growth promoting rhizobacteria as well as the correlation between biofilm formation and crop productivity further the authors illustrate the green synthesis of biochemical compounds such as hydroxamid acid or biosurfactants using microbial and fungal enzymes it inspires young researchers and experienced scientists in the field of microbiology to explore the combined use of green white and red biotechnology for industrial purposes which will be one of the central topics for future generations

Industrial Applications of Soil Microbes: Volume 2 2016-09-13

the quality of drinking water is paramount for public health despite important improvements in the last decades access to safe drinking water is not universal the world health organization estimates that almost 10 of the population in the world do not have access to improved drinking water sources among other diseases waterborne infections cause diarrhea which kills nearly one million people every year mostly children under 5 years of age on the other hand chemical pollution is a concern in high income countries and an increasing problem in low and middle income countries exposure to chemicals in drinking water may lead to a range of chronic non communicable diseases e g cancer cardiovascular disease adverse reproductive outcomes and effects on children s health e g neurodevelopment among other health effects although drinking water quality is regulated and monitored in many countries increasing knowledge leads to the need for reviewing standards and guidelines on a nearly permanent basis both for regulated and newly identified contaminants drinking water standards are mostly based on animal toxicity data and more robust epidemiologic studies with accurate exposure assessment are needed the current risk assessment paradigm dealing mostly with one by one chemicals dismisses the potential synergisms or interactions from exposures to mixtures of contaminants particularly at the low exposure range thus evidence is needed on exposure and health effects of mixtures of contaminants in drinking water finally water stress and water quality problems are expected to increase in the coming years due to climate change and increasing water demand by population growth and new evidence is needed to design appropriate adaptation policies this special issue of international journal of environmental research and public health ijerph focuses on the current state of knowledge on the links between drinking water quality and human health

as more countries become water scarce alternative water sources like treated wastewaters will be used to meet the demands of the domestic agriculture and industrial sectors however the use of treated wastewater is only justified when it is without any detrimental impacts on public health food safety and water quality to minimize impacts well operated treatment plants are important barriers that reduce the amount of contaminants disseminated from wastewaters into the environment during reuse events continuous accurate and comprehensive monitoring on our water further safeguards the public against potential risks this ebook looks into topics that close the knowledge gaps in these mentioned areas
