explores the complex relationship humans have with the environment it is one of both responsibility including the sustainable or unsustainable management of natural resources and emotion like the elation gleaned from a beautiful landscape or the devastation experienced from a natural disaster human induced damage to the environment has widespread consequences for earth and its inhabitants that have already included sea level rise increased wildlife extinctions heatwaves droughts intensified air pollution and water shortages this book provides comprehensive coverage of the complex interactions between

people and the environment it presents three clear honest and down to earth essays that cover the devastating impact humans have on the environment the equally devastating impact the environment has on humans at times and the positive impact that increasing awareness of our effect on the planet is having on the movement to create a more sustainable future in addition in depth entries on 60 key environmental geography terms such as deforestation ecotourism and environmental justice provide a deeper dive into the topic 15 real world case studies on topics like the great pacific garbage patch and the great green wall of africa illustrate geography in action and 10 brief spotlights from around the world draw the reader in with relevant facts

the purpose of this collection of essays is to shed some light on the complex relationship between environmental quality and the distribution of income are the preferences of the poor towards a cleaner environment really different from those of the rich environmental economists have traditionally focused on efficiency issues in their analyses the quality of the environment is usually related to aggregate or average variables like per capita income policy recommendations are usually formulated considering efficiency with no regard

for equity and also the predicted effects of policies are evaluated in aggregate terms the essays collected in this volume go into the problem of the relationship between environmental quality and income distribution the book's opening essay shows how different theories of economic growth and environmental quality seem to suggest that the higher the level of income the higher is the value of environmental protection the essays that follow a mix of already published papers and of papers solicited for this book analyse the relationship between environmental quality and income distribution from different perspectives both micro and macro and on the basis of more than one methodology this book highlights that the preferences of the poor towards a cleaner environment may differ from those of the rich but income is also very likely to represent only one factor affecting them the essays consider other relevant factors affecting preferences for environmental quality what clearly emerges is that the distribution of costs and benefits of environmental policies is the key for their successful implementation and that further research is needed to both address the distributional effects themselves and the strategies to mitigate them

in rich countries environmental problems are seen as problems of prosperity in poor countries they are seen as problems of poverty this is because the environmental problems in poor countries such as lack of clean drinking water are problems that affect them here and now whereas in rich countries the environmental problems that people worry about most are those that largely as a result of current prosperity and economic growth seem likely to harm mainly future generations but what exactly are our obligations to future generations are these determined by their rights or intergenerational justice or equity or sustainable development the first part of the book argues that none of these concepts provides any guidance but that we still have a moral obligation to take account of the interests that future generations will have and an appraisal of probable developments suggests that while environmental problems have to be taken seriously our main obligation to future generations is to bequeath to them a society in which there is greater respect for basic human rights than is the case today furthermore generations are not homogeneous entities resources devoted to environmental protection cannot be used for say health care or education or housing not to mention the urgent claims in poor countries for better food sanitation drinking water shelter and basic infrastructures to prevent or cure widespread disease it cannot serve the interests of justice if the burden of protecting the environment for the benefit of posterity is born mainly by poorer people today

growing populations and economies have increased the public's awareness that the world's environmental resources are finite. The issues of global warming and the depletion of the ozone layer have given universal significance to what were once local and regional pollution problems. What is evident from public economics and the environment in an imperfect world is that Coasian negotiations fail to internalize the costs of environmental degradation, often calling for public intervention through the market mechanism. In its consideration of such issues, the book includes contributions on assessment problems, institutional aspects, the need for coordination and efficiency, and distribution issues.

the battle to save the world is being joined by a powerful new group of warriors celebrities are lending their name to conservation causes and conservation itself is growing its own stars to fight and speak for nature in this timely and essential book dan brockington argues that this alliance grows from the mutually supportive publicity celebrity and conservation causes provide for each other and more fundamentally that the flourishing of celebrity and charismatic conservation is part of an ever closer intertwining of conservation and corporate capitalism celebrity promotions the investments of rich executives and the wealthy social networks of charismatic conservationists are producing more commodified and commercial conservation strategies conservation becomes an ever more important means of generating profit celebrity and the environment provides vital critical analysis of this new phenomena and argues that ironically there may be a hidden cost to celebrity power to individual's relationships with the wild the author argues that whilst wildlife television documentaries flourish there is a significant

decline in visits to national parks in many countries around the world and this is evidence that t a time when conservationists are calling for us to restore our relationships with the wild many people are doing so simply by following the exploits of celebrity conservationists
