neuroscience has made considerable progress in figuring out how the brain works we know much about the molecular genetic and biochemical underpinnings of sensory and motor functions recent neuroimaging work has opened the door to investigating the neural underpinnings of higher order cognitive functions such as memory attention and even free will in these types of investigations researchers apply specific stimuli to induce neural activity in the brain and look for the function in question however there may be more to the brain and its neuronal states than the changes in activity we induce by applying particular external stimuli in volume 2 of unlocking the brain georg northoff addresses consciousness by hypothesizing about the relationship between particular neuronal mechanisms and the various phenomenal features of consciousness northoff puts consciousness in the context of the resting state of the brain thereby delivering a new point of view to the debate that permits very interesting insights into the nature of consciousness moreover he describes and discusses detailed findings from different branches of neuroscience including single cell data animal data human imaging data and psychiatric findings this yields a unique and novel picture of the brain and will have a major and lasting impact on neuroscientists working in neuroscience psychiatry and related fields

in cytochrome p450 protocols ian phillips and elizabeth shephard assemble a comprehensive collection of cutting edge techniques for the investigation of cytochromes p450 described in detail by hands on experimentalists for easy reproducibility these methods include spectral analysis purification and enzymatic assays expression in heterologous systems and the production and use of antibodies as well as methods for quantification of gene expression transfection of hepatocytes and for the investigation of dna protein interactions and genetic polymorphisms in addition because of the growing importance of in vitro systems in pharmacological toxicology the book contains techniques for the culture of rodent and human hepatocytes and human epidermis cytochrome p450 induction as a biomarker for environmental pollution and the generation of mice with targeted gene disruptions complete this exhaustive collection of core techniques cytochrome p450 protocols includes in one volume both state of the art and classic methods that have not been superseded but remain extremely useful the collection provides both novice and experienced researchers across many fields toxicology pharmacology environmental biology biochemistry and molecular biology all the tools needed to elucidate the crucial biological role played by cytochromes p450 in the metabolism of therapeutic drugs chemical carcinogens and environmental pollutants

CBAP® Certification and BABOK® Study Guide

2013-05-06

the first five minutes of a classroom experience are critical the tone set in a session s opening minutes can significantly impact and influence in both positive and negative ways the quality and nature of the subsequent learning experience how students spend that time can also have a positive impact on their learning in both the

short and long term when the opening minutes of a class are approached as an opportunity to build student connections collaboration and community all learners benefit as more and more learning experiences occur in synchronous and asynchronous online learning environments strategies that both welcome students to online sessions and support student learning are increasingly important traditional ice breakers while typically shared with a goal of building community and student engagement can sometimes have unintended or even negative consequences on students this text shares a collection of powerful opening activities that are designed to simultaneously engage students build safe and connected classroom communities and support student learning all strategies are easily adapted and personalized to fit individual course and content needs including face to face synchronous online and asynchronous online learning contexts shared activities are aligned with associated learning science research and incorporate strategies that have been shown to support student engagement and learning such as retrieval practice active recall spaced practice and interleaving among other evidence based instructional strategies

Time Resources, Society and Ecology

2017-10-04

this volume presents a theoretical framework for understanding consciousness and learning drawing on work in cognitive psychology and philosophy this framework begins with the observation that to be conscious is literally to have a point of view from this starting point the book develops a descriptive scheme that allows perceptual symbolic and emotional awareness to be discussed in common theoretical terms compatible with a computational view of the mind a central theme is our experience of ourselves as agents consciously controlling activities situated in environments in contrast to previous theories of consciousness the experienced cognition framework emphasizes the changes in conscious control as individuals acquire skills the book is divided into four parts the first introduces the central themes and places them in the context of information processing theory and empirical research on cognitive skill the second develops the theoretical framework emphasizing the unity of perceptual symbolic and emotional awareness and the relation of conscious to nonconscious processes the third applies the experienced cognition framework to a variety of topics in cognitive psychology including working memory problem solving and reasoning it also includes discussions of everyday action skill and expertise focusing on changes in conscious control with increasing fluency the last concludes the book by evaluating the recent debate on the cognitive unconscious and implicit cognition from the perspective of experienced cognition and considering the prospects for a cognitive psychology focused on persons this book addresses many of the issues raised in philosophical treatments of consciousness from the point of view of empirical cognitive psychology for example the structure of conscious mental states is addressed by considering how to describe them in terms of variables suitable for information processing theory understanding conscious states in this way also provides a basis for developing empirical hypotheses for example about the relation of emotion and cognition about the apparent mindlessness of skilled activity and about the nature and role of goals in guiding activity criticisms of the computational view of mind are addressed by showing that the role of first person perspectives in cognition can be described and investigated in theoretical terms compatible with a broadly conceived information processing theory of cognition
