without typos from the publisher not indexed not illustrated 1922 edition excerpt chapter xix the rural school and rural education value and function of education the tendency in civilized society during recent times has been to place increasing emphasis upon education and especially to hold the state responsible for the establishment and support of schools for the young whether rightly or wrongly the public has come to believe that the undertaking by governmental authority to educate each succeeding generation by means of these agencies is a necessary and vital function the function of state education as distinguished from private undertakings appears to be to put it in very general terms to qualify the developing individuals to take their place in organized society in a competent manner to carry on its activities smoothly and efficiently to preserve its spirit continue its type of culture and to be able to discharge the duties of citizens intelligently and conscientiously this can be made more specific by indicating the points on which progressive educators are placing emphasis today it is generally agreed that all persons should be economically productive each member of society should be able to contribute his own support to provide for that of his family and in addition contribute to that of the unfortunate classes consequently everyone should know how to do something useful to grow mine or make something or to perform some needed service or task and since society is constituted of vocational structures or interests whatever else it may be this means that every individual should be trained to a vocation the schools of every community naturally would seek to qualify the young for the callings which the majority of the citizenry are likely to follow in a simple undifferentiated sociological background rural institutions in action how changes are affecting rural society urban and rural sociology urban sociology is the sociological study of life and human interaction in metropolitan areas it is a normative discipline of sociology seeking to study the structures processes changes and problems of an urban area and by doing so provide inputs for planning and policy making in other words it is the sociological study of cities and their role in the development of society like most areas of sociology urban sociologists use statistical analysis observation social theory interviews and other methods to study a range of topics including migration and

demographic trends economics poverty race relations and economic trends the philosophical foundations of modern urban sociology originate from the work of sociologists such as karl marx ferdinand tonnies emile durkheim max weber and georg simmel who studied and theorized the economic social and cultural processes of urbanization and its effects on social alienation class formation and the production or destruction of collective and individual identities rural sociology is a field of sociology associated with the study of social life in rural areas it is an active field in much of the world and in the united states originated in the 1910s with close ties to the national department of agriculture and land grant university colleges of agriculture the sociology of food and agriculture is one focus of rural sociology and much of the field is dedicated to the economics of farm production this book is fed with information on this subject this book will be very useful for a wide range of interested groups contents the challenges of globalisation urban vs rural india panchayati raj system panchayat before and after 73rd amendment agrarian unrest and peasant movements industry and society impact of social structure on industry workers participation in management in india sociology of development socialist economies in practice excerpt from rural sociology since the first edition of this book was published in 1948 the world has seen the results of world war ii and of its aftermath the cold war made manifest in human affairs these events have had a serious impact upon rural life in the united states in the main the result has been to accelerate the rate of social change all aspects of life material and non material seem to have been affected the advances in agricultural technology have never been equaled in a comparable period in american history for example electricity has been brought to nearly all the farms of the nation for the first time as late as 1935 only one in ten farms was served from a central electric generator farm production has steadily mounted while the number of farms has steadily declined the farm population has become thinner tractors have largely replaced horses and the ingenious machines associated with the tractor have so reduced the need for human labor that migration from farms to cities towns and villages has become a spectacle rivaling the enclosures in britain in the early stages of the industrial revolution

these changes have affected the social relations of rural people the institutions of education religion government and family have had important adjustments to make even so the full effects of this new industrial revolution in agriculture have not been fully experienced and understood more changes are yet to come in this revision the author has introduced facts to indicate the remarkable changes that have taken place during the past decade and a half since the changes are still in process it is impossible to do more than indicate the trends and suggest directions about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works with reference to india published to commemorate the 50th anniversary of the rural sociological society this monograph analyzes the nearly 90 years of rural sociological research on agriculture and provides a comprehensive overview of changing research focuses and theoretical approaches as the authors note at the outset there are a good number of continuities between early 20th century rural sociology and what is now called the sociology of agriculture there are also they note very substantial differences between contemporary sociology of agriculture scholarship and that which preceded it their aim throughout is to convey both continuities and discontinuities in theory method and approach intended primarily as a straightforward exposition of major scholarly themes the volume is designed to be useful to readers from a variety of theoretical persuasions the authors do however point to areas of weakness in theoretical or methodological approach that should be addressed in future research the volume is organized around the three major eras of rural sociological conceptualizations of agriculture the authors begin by examining the founding of u s rural sociology shortly after the turn of the century until the early 1950s demonstrating that during this initial era

the study of agriculture was largely construed as one of the many elements necessary for understanding the social fabric of rural community life in the next section they explore the social psychological behaviorist tradition which held sway from the early 1950s through the early 1970s and which conceptualized farmers as actors responding to stimuli such as new technologies and educational opportunities the three chapters devoted to recent research in the emerging tradition of the new rural sociology address such topics as the political economy of agriculture the environment of agriculture and major theoretical trends in the sociology of agriculture in their concluding chapter the authors look toward the future of the sociology of agriculture and identify some potential problems as we move into the 1990s
