Corruption is once again high on the international policy agenda as a result of globalization, the spread of democracy, and major scandals and reform initiatives. But the concept itself has been a focus for social scientists for many years, and new findings and data take on richer meanings when viewed in the context of long-term developments and enduring conceptual debates. This compendium, a much-enriched version of a work that has been a standard reference in the field since 1970, offers concepts, cases, and fresh evidence for comparative analysis, building on a nucleus of classic studies, laying out the nature and development of the concept of corruption. The book also incorporates recent work on economic, cultural, and linguistic dimensions of the problem, as well as critical analyses of several approaches to reform. While many authors are political scientists, work by historians, economists, and sociologists is strongly represented. Two-thirds of the nearly fifty articles are based either on studies especially written or translated for this volume or on selected journal literature published in the 1990s. The tendency to treat corruption as merely a synonym for bribery is illuminated by analyses of the diverse terminology and linguistic techniques that help distinguish corruption problems in the major languages. Recent attempts to measure corruption and to analyze its causes and effects quantitatively are also critically examined. New contributions emphasize especially corruption phenomena in Asia and Africa, contrasts among region and regime types, comparing U.S. state corruption incidence, European party finance, and corruption assessments of international corruption rating projects. Analyses of international corruption control treaties, unintended consequences of anti-corruption efforts, cumulatively, the book combines description, richness, analytical thrust, conceptual awareness, and contextual articulation.

physics education research is a young field with a strong tradition in many countries however it has only recently received full recognition of its specificity and relevance for the growth and improvement of the culture of physics in contemporary society for different levels and populations this may be due on one side to the fact that teaching therefore education is part of the job of university researchers and it has often been implicitly assumed that the competences required for good research activity also guarantee good teaching practice on the other side and perhaps more important is the fact that the problems to be afforded in doing research in education are complex problems that require a knowledge base not restricted to the disciplinary physics knowledge but enlarged to include cognitive science communication science history and philosophy the topics discussed here look at some of the facets of the problem by considering the interplay of the development of cognitive models for learning physics with some reflections on the physics contents for contemporary and future society with the analysis of teaching strategies and the role of experiments the issue of assessment and cultural aspects information is also given on the organizations involved in connecting various aspects of physics education the international commission on physics education the european physical society and the european physics education network

this book aims to document and analyse the enduring involvement of children in the commercial sex trade in twentieth century england it uncovers new evidence to indicate the extent of under age prostitution over this period a much neglected subject despite the increased visibility of children more generally the authors argue that child prostitution needs to be understood within a broader context of child abuse and that this provides one of the clearest manifestations of the way in which deviant groups can be conceived of as both victims and threats the picture of child prostitution which emerges is one of exclusion from mainstream society and the law and remoteness from the agencies set up to help young people in trouble which were often reluctant to accept the realities of child prostitution the evidence provided in this book indicates that the circumstances which have led young people into prostitution over the last hundred years amount at worst to physical or psychological abuse or neglect and at best as the result of limited choice
