while the growth of computational thinking has brought new awareness to the importance of computing education it has also created new challenges many educational initiatives focus solely on the programming aspects such as variables loops conditionals parallelism operators and data handling divorcing computing from real world contexts and applications this decontextualization threatens to make learners believe that they do not need to learn computing as they cannot envision a future in which they will need to use it just as many see math and physics education as unnecessary the handbook of research on tools for teaching computational thinking in p 12 education is a cutting edge research publication that examines the implementation of computational thinking into school curriculum in order to develop creative problem solving skills and to build a computational identity which will allow for future stem growth moreover the book advocates for a new approach to computing education that argues that while learning about computing young people should also have opportunities to create with computing which will have a direct impact on their lives and their communities featuring

a wide range of topics such as assessment digital teaching and educational robotics this book is ideal for academicians instructional designers teachers education professionals administrators researchers and students

the plethora of literature produced over the past decade in response to the perceived failure of the human rights project to deliver results for billions of people living in adverse environments has usually focused on international legal standards and mechanisms with

little regard for the root structural realities that constrain their implementation hence a text that primarily focuses on the major challenge of realisation of human rights in the context of diverse realities is urgently needed this book then provides an analytical as well as inspirational text on human rights from a contextual perspective it offers a reconceptualisation of human rights as not merely legal resources but political tools as well after an introduction that familiarizes the reader with some of the key concepts used throughout the book is divided into six chapters the first two combine a critique of the overly legal use of human rights with a reconceptualisation of their potential as powerful tools outside of the legal context the next two chapters examine the nature of the structural challenges that face realisation both on the global and on the local level the last two chapters analyse two major areas of the human rights deficit the structural non implementation of the rights of the poor and the failing protection of non dominant collectivities finally a concluding chapter elaborates on the main findings and insights gained the book combines rigorous juridical study with a focus on political economic analysis of rights in context hence it aims at an interdisciplinary treatment of human rights as opposed to current texts that have a tendency to be monodisciplinary the book should be of interest to students of human rights political economy law and conflict studies as well as those who work or research in these areas
