from 1918 to the late 1940s a host of influential scientists and intellectuals in europe and north america were engaged in a number of far reaching unity of science projects in this period of deep social and political divisions scientists collaborated to unify sciences across disciplinary boundaries and to set up the international scientific community as a model for global political co operation they strove to align scientific and social objectives through rational planning and to promote unified science as the driving force of human civilization and progress this volume explores the unity of science movement providing a synthetic view of its pursuits and placing it in its historical context as a scientific and political force through a coherent set of original case studies looking at the significance of various projects and strategies of unification the book highlights the great variety of manifestations of this endeavour these range from unifying nuclear physics to the evolutionary synthesis and from the democratization of scientific planning to the utopianism of h g wells s world state at the same time the collection brings out the substantive links between these different pursuits especially in the form of interconnected networks of unification and the alignment of objectives among them notably it shows that opposition to fascism using the instrument of unified science became the most urgent common goal in the 1930s and 1940s in addressing these issues the book makes visible important historical developments showing how scientists participated in and actively helped to create an interwar ideology of unification and bringing to light the cultural and political significance of this enterprise

1995

the road to the best possible science runs along all kinds of ondulary paths of peer evaluation with the preferences assumptions prejudices and convictions of the evaluating readers it runs over the bumpy roads of ideological preferences and obstinacies that are mostly negatively affected muddled by the urge for power and money of institutional and political botching so that any pure outcome will be difficult to achieve there are also all sorts of detours and side tracks inspired by the obsession with instant solutions reductionistic and absolutising oversimplifications of the full multiple reality and the complex

ÿknowledge world but above all by the intriguing fickleness of impulsive and ever present fallible human beings with this in mind the best possible science as emphasised in this publication can never be defined in any final sense nor can it ever without any doubt be achieved although this remains our firm ideal
