The Orchid Grower's Manual 2011 a personal note I decided to initiate orchid biology reviews and perspectives in about 1972 and alone or with co authors started to write some of the chapters and the appendix for the volume in 1974 during a visit to the Bogor Botanical Gardens in Indonesia Professor H. C. de Wit of Holland was also in Bogor at that time and when we discovered a joint interest in Rumphius he agreed to write a chapter about him I visited Bangkok on my way home from Bogor and while there spent time with Professor Thavorn Vajrabhaya he readily agreed to write a chapter the rest of the chapters were solicited by mail and I had the complete manuscript on my desk in 1975 with that in hand I started to look for a publisher most of the publishers I contacted were not interested fortunately Mr James Twiggs at that time editor of Cornell University Press grew orchids and liked the idea he decided to publish orchid biology reviews and perspectives and volume I saw the light of day in 1977 I did not know if there would be a volume II but collected manuscripts for it anyway fortunately volume I did well enough to justify a second book and the series was born it is still alive at present 20 years seven volumes and three publishers later I was in the first third of my career when volume I was published

Orchids For Dummies 2022-03-29 as stated many times before the purpose of orchid biology reviews and perspectives is to present reviews on all aspects of orchids the aim is not to balance every volume but to make a balanced and wide ranging presentation of orchids in the series as a whole the chapters in this the last volume of the series range over a number of topics which were not covered before Singapore is justly famed for its orchids they can be seen on arrival or departure in its modern highly efficient and comfortable Changi Airport and on the way from it to town Vanda Miss Joaquim the first hybrid to come from Singapore became its national flower this natural hybrid can be seen on its currency stamps and public and private decorations many excellent breeders starting with Prof Eric Holttum who bred the first man made hybrid *Spathoglottis primrose* produced numerous magnificent hybrids and won countless awards in Singapore and elsewhere these hybrids served to enrich the country's orchid mystique in the opening chapter of this volume Dr Teoh Eng Soon western style Eng Soon Teoh himself a prize winning orchid breeder grower and author writes about some of the breeders who contributed to the Singapore orchid fame Prof Hans Fitting was one of the best known plant physiologists of his time as a young man he studied the effects of pollen on orchid flowers

Antelopes 2001 many books have been written with respect to either time management quality control assurance cost control or the likes however if you apply them in isolation you may compromise either time quality or cost as a result many people just accept the so called balance

between time quality and cost to the writer that balance is not good enough so for the first time a book is written with the view to acquire the three important values in totality and achieve excellence with the introduction of the terms zero time zero mistake zero cost and a problem solving principle chapter 1 will explain the philosophies behind the problem solving principle uphold by this book chapter 2 will illustrate the ingredients of this problem solving principle i e the formulas such as the next definite step discontinue the work what we want ultimately etc which were derived from the philosophies explained in chapter 1 chapter 3 will explain how the formulas stated in chapter 2 were applied in piece meal basis to manage fast track projects by some reputable companies in the world chapter 4 will illustrate how the formulas are integrated to form a simple but yet effective and efficient problem solving principle the ways on how this problem solving principle can be applied to solve simple to complicated problems are explained in chapter 5 this problem solving principle is also flexible such that you can integrate it with your way of thinking to manage time quality and cost the way you want

Zero Time, Zero Mistake, Zero Cost 2004 understanding diversity patterns and the effect of global change on abundance distribution patterns and species survival are of the most discussed topics in biodiversity research species are disappearing worldwide mostly due to habitat loss but other factors like climate change are likely to increase in importance during the 21st century thus one of the most worrying issues is that we still do not know the optimal abiotic and biotic requirements for population

persistence of many of the still existing species which makes it very difficult if not impossible to make appropriate recommendations for their conservation in terms of proposing an effective management of their sites analysis of these requirements is however strongly dependent on the taxonomic group considered and on life history strategies of the species that comprise the group in this research topic we concentrate on this issue applied to orchids one of the most abundant groups of flowering plants with approximately 30 000 species they are classified among the most threatened groups worldwide of the approximately 1000 species that have been evaluated almost 60 are threatened endangered or extinct for a few orchid species detailed records from monitoring efforts provide opportunities for comparative analyses of species declines through time however for most orchid species we still lack population data and there have been few studies that have focused on the environmental factors and species traits associated with the decline of orchid sites and species numbers

Orchids of Tropical America 2015-12-15 the black and the white rhinoceros have become flagship species for international conservation they are significant not only for the continuation of a major evolutionary heritage but also as symbols for the protection of african savannahs the battle for the survival of these species has been marked by some notable successes and sadly many failures and the situation is still critical the international horn trade ban and the domestic bans imposed in most traditional user states have driven the trade further underground in some cases inflating prices and making illegal dealing even more lucrative this plan is aimed at donors government and non government organizations and all those involved in rhino conservation it outlines the actions and strategies needed to catalyse support for these majestic animals and help secure their future in sub saharan africa the overall conclusion is that given the political will stability and adequate field expenditure rhinos can be conserved in the wild

The Orchid Book 1992-11-12 the atlantic forest is one of the 36 hotspots for biodiversity conservation worldwide it is a unique large biome more than 3000 km in latitude 2500 in longitude marked by high biodiversity high degree of endemic species and at the same time extremely threatened approximately 70 of the brazilian population lives in the area of this biome which makes the conflict between biodiversity conservation and the sustainability of the human population a relevant issue this book aims to cover 1 the historical characterization and geographic variation of the biome 2 the distribution of the diversity of some relevant taxa 3 the main threats to biodiversity and 4 possible opportunities to ensure the biodiversity conservation and the economic and social sustainability also it is hoped that this book can be useful for those involved in the development of public policies aimed at the conservation of this important global biome
