hundreds of thousands of students with learning disabilities head to college every year the challenges seem endless aside from coping with difficulties in learning students and their families face the daunting process of seeking out the right school for their specific needs this indispensable resource includes advice from specialists in the field of learning disabilities learning disabled programs admission requirements and graduation policies services available to learining disabled students at each college

tutors note takers oral exams extended test time and more policies and procedures regarding course waivers or substitutions names phone numbers and email addresses of program administrators at each school strategies for finding the right program for each student s needs in addition to the 338 schools profiled a quick contact reference list provides essential program information for another 1 000 schools

Cumulative List of Organizations Described in Section 170 (c) of the Internal Revenue Code of 1986 1988

the demonstration of the basic brain mechanism through studying the partially commissure sectioned case appears to be a most prom ising enterprise the work with animals of hamilton and others in elucidating psychological brain process heretofore not imagined are mere indications of what the potential seems to be study of the partially disconnected patient seems equally revealing and productive in showing how many high level cognitive activities are managed in the cerebral flow of information with respect to the issue of localization of function it would seem clear that those cerebral areas clearly involved in the im mediate processing of raw sensory information can be selectively and specifically isolated and disconnected in other words the informational products of the long axonal type cells of golgi which marcus jacobson claims are the brain cells under strict genetic control can be isolated whereas the products of more complex and integrative mental activities which are managed by the more mutable golgi type ii cells do not seem to be so spec ifically disposed thus these data suggest the lateralized spe cialities of the various left and right brain areas can make their contribution to the cerebral activities of the opposite hemisphere through almost any callosal area regardless of its size and loca tion indeed this interpretation suggests to me that the long standing issue of the extent of localization could be better un derstood by considering the dichotomy in genetic specification as offered by hirsch and jacobson 1974
