in contrast to the great diversity of other crime and delinquency research measures those drawn from the cpi and the mmpi have much in common they are taken from standardized instruments administered under controlled conditions with known stimulus properties and validity indicators the cpi and mmpi measures will frequently be instruments of choice in research on personality and psychodynamics of offenders chapter 6 law enforcement and police this chapter encompasses a variety of scales that refer to law enforcement or police agencies unfortunately in the case of many scales these terms are used simply with the assumption that the respondents understand the concepts and use them in the same way as researchers in other cases however specific policing functions are identified and described as noted in chapter 3 a standard order of scale presentation is followed first the attitudes scales are presented followed by the behavior ratings per sonality measures milieu ratings prediction measures and finally the very broad category of description after the reviews are completed within each subcategory other scales in that category are listed see chapter 2 for a description of the criteria that were used in deciding upon whether a scale would be reviewed or simply listed listed scales are presented by title and bibliographic reference followed by a very brief description

this second edition continues to present the following special features of its highly successful predecessor an analysis of the major partitionings of the mmpi into special scales in terms of their clinical usefulness resulting in the selection of those scales that most discriminatingly and non redundantly represent the core psychological traits and qualities captured by the mmpi a number of individually developed scales that tap into additional aspects of validity

psychopathology and adjustment and personality the indiana special scales which sample additional areas that were not as well identified or delineated by prior scale development a critique of the foregoing selections in light of the extant mmpi literature which this second edition further expands up to the current time and of a major investigation at the indiana university medical school of the conjoint use of special scales a critique of the shortcomings of high point codes a detailed categorized listing of the most useful scales in empirical clusters based on their established intercorrelations such that not only scale elevations but also interrelations and the departures from the expected of scales become clinically interpretable an exploration of the interrelationships between rorschach and mmpi variables leading to complementary use of these two instruments this second edition also takes into account the development of mmpi 2 and the status of its new special scales vis a vis the established scales derived from the original mmpi in so doing it indicates why the original scales continue to offer substantial advantages over the mmpi 2 scales it further examines changes in the nosology of personality disorders and proposes special scale markers for these disorders as they have been clarified progressively through dsm iv this volume offers the mmpi user a library of psychological report statements based on special scale interpretation with recommended score ranges and cutting points for particular inferences these latter features appear together as an appendix styled as the human computer unlike the typical computer generated report this appendix makes all decision rules explicit thereby permitting the user to use the library of statements with full knowledge of their applicability by retaining the element of clinical judgment the human dimension of inference the user is enabled to better integrate mmpi special scale findings with data from other sources while in the process of crafting the report all of these new features are accompanied by applicable literature citations

## Handbook of Scales for Research in Crime and Delinquency

1915

by 2050 the world's population will reach 9.1 billion which requires an increase of food production by 70 percent compared to 2005. FAO 2018: nearly all the increase will occur in developing countries where agriculture plays a major role to provide employment income and to improve food security. One of the major challenges of increasing food supply is the limited water resources. Agriculture as the driver of freshwater exploitation has therefore to be transformed into more resource efficient production. FAO 2003: the world's limited freshwater resources are potentially threatened by the expansion of agriculture. Increasing the potential output per amount of water used is an appropriate practice to improve production efficiency while protecting water resources. Therefore, increasing the productivity of agricultural water use in a sustainable manner is essential to ultimately sustain the social and economic conditions of livelihoods. Crop water productivity has grown into one of the major approaches to cope with water scarcity and advance crop water relation. The number of conceptual frameworks and implications is ample but there is always a growing need to review the step-by-step approach. Beyond in this field guide, practical pathways are presented to provide a comprehensive approach for assessing and improving crop water productivity in small-scale agriculture. The field guide draws lessons learned in three countries: Burkina Faso, Morocco, and Uganda within the framework of FAO project strengthening agricultural water efficiency and productivity at the African and global level, funded by Swiss Agency for Development and Cooperation SDC.

Sluggish cognitive tempo (SCT) is increasingly recognized as a valid attention disorder distinct from attention deficit hyperactivity disorder. The culmination of more than 10 years of research and development, the Barkley Sluggish Cognitive Tempo Scale (BSCTS-CA) is the first empirically based, norm-referenced tool designed to assess SCT symptoms for example chronic daydreaming, inability to focus, and lethargy in the daily life activities of 6 to 17-year-olds. The scale typically takes a parent less than 5 minutes to complete. Detailed instructions for scoring and interpretation are provided. Also included is a clinical interview form based on the rating scale for use in unusual circumstances where a parent is unable to fill out a rating scale. Quick View What Does It Do assesses concentration deficits in the daily life activities of children and adolescents, age range 6-17. Administration time less than 5 minutes. Format: parent report rating scale. Cost of additional forms: no cost. Purchasers get permission to reproduce the forms and score sheets for repeated use. See also the Barkley Deficits in Executive Functioning Scale (BDEFS-CA) and the Barkley Functional Impairment Scale (BFIS-CA). Includes permission to photocopy, enhancing the convenience and value of the BSCTS-CA. The limited photocopy license allows purchasers to reproduce the forms and score sheets and yields considerable cost savings over other available scales. The large format and sturdy wire binding facilitate photocopying. Age range 6-17. Forms and profiles: BSCTS-CA Parent Rating Scale, BSCTS-CA Parent Interview, BSCTS-CA SCT Profile (Ages 6-11, Males Only), BSCTS-CA SCT Profile (Ages 6-11, Females Only), BSCTS-CA SCT Profile (Ages 12-17, Males Only), BSCTS-CA SCT Profile (Ages 12-17, Females Only).

the role of irrigation in gearing agriculture development towards a broader economic growth is undeniable. Accordingly, irrigation is growing into a key operational strategy for governments and their agencies to increase agricultural productivity, thus combatting food insecurity and boosting

overall growth while agriculture absorbs rural workforce generates income and increases food security it has become the most important driver in freshwater exploitation the rapid expansion of water demand leads to the generalized phenomena of imbalance between water supply and water demand this increasing pressure on water resources urges enhancing water use efficiency enhancing water use efficiency requires actions at all levels from agricultural practitioners to scheme managers and up to the policy makers the objective of this field guide is to show practical measures to improve water use efficiency in small scale agriculture based on case studies from burkina faso morocco and uganda the book not only presents applicable water use efficiency measures but also guide the readers through their real term implementation while the guide provides complete set of instructions to improve water use efficiency in order to reach optimal irrigation practices the successful outcome still depends on the farmers willingness to embrace and adopt the recommended measures the guide holds in evidence that farmers are often constrained by available resources to improve their practices in terms of budget inputs or labour in order to take these issues into account the recommendations are limited on practical measures which can be followed by farmers without requiring additional resources

psychologists offer an increasing variety of services to the public among these services psychological assessment of personality and behavior continues to be a central activity one main reason is that other mental health professionals often do not possess a high level of competence in this area and when dealing with children and adolescents psychological

assessment seems to take on an even greater role therefore it follows that comprehensive graduate level instruction in assessment should be a high priority for educators of psychologists who will work with these youth this textbook is organized into three sections consistent with the authors approach to teaching part i provides students with the psychological knowledge base necessary for modern assessment practice including historical perspectives measurement science child psychopathology ethical legal and cultural issues and the basics of beginning the assessment process part ii gives students a broad review of the specific assessment methods used by psychologists accompanied by specific advice regarding the usage and strengths and weaknesses of each method in part iii we help students perform some of the most sophisticated of assessment practices integrating and communicating assessment results and infusing assessment practice with knowledge of child development and psychopathology to assess some of the most common types of behavioral and emotional disorders in youth a text focusing on assessment practices must be updated every four to six years to keep pace with advances in test development for example several of the major tests reviewed in the text such as the behavioral assessment system for children and the child behavior checklist have undergone major revisions since the publication of the last edition making the current content outdated further another major test the conners rating scales is undergoing substantial revisions that should be completed before publication of the next edition finally the evidence for the validity of the tests and the recommendations for their appropriate use evolve as research accumulates and requires frequent updating to remain current for example there was a special issue of the journal of clinical child and adolescent psychology published focusing on evidenced based assessment of the major forms of childhood psychopathology that will need to be integrated into the chapters in part 3 this latter point reflects an important trend in the field that should influence the marketing of the book that is there are several initiatives being started in all of the major areas of applied psychology e g school clinical and counseling to promote evidenced based assessment practices these initiatives have all emphasized the need to enhance the training of graduate students in this approach to assessment this has been the orientation of this textbook from its first edition that is clinical assessment of child and adolescent personality and behavior has focused on using research to guide all recommendations for practice the ability of the textbook to meet this training need should be an important focus of marketing the book to training programs across all areas of applied psychology

the role of employment in poverty reduction programmes in developing countries has received considerable attention the world over many new employment opportunities in many developing countries are created in the informal sector where the rate of growth may be higher than that of the formal sector dairy markets offer good opportunities for non farm rural and urban employment this may particularly be true in informal milk markets which rely less on modern milk processing equipment and more on traditional labour intensive technologies the case studies from kenya bangladesh and ghana provide an opportunity to gain strategic insights into how small scale dairy marketing and processing can contribute significantly to rural and urban employment most of which occurs in the informal sector the capacity for small scale dairy processing and marketing to generate jobs in rural communities as well as in peri urban and urban areas is demonstrated although the evidence presented here is based on simple case studies and should be taken as only indicative it nevertheless demonstrates the strong potential for even small quantities of milk to generate employment in rural and peri urban areas
