Boys in White 1972

the transition from young layman aspiring to be a physician to the young physician skilled in technique and confident in his dealings with patients is slow and halting to study medicine is generally rated one of the major educational ordeals of American youth the difficulty of this process and how medical students feel about their training their doctor teachers and the profession they are entering is the target of this study now regarded as a classic boys in white is of vital interest to medical educators and sociologists by daily interviews and observations in classes wards laboratories and operating theaters the team of sociologists who carried out this firsthand research have not only captured the worries cynicism and basic idealism of medical students they have also documented many other realities of medical education in relation to society with some sixty tables and illustrations the book is a major experiment in analyzing and presenting qualitative data

UCSF General Catalog 2022-12-16

this book focuses on the challenges to biomedical education posed by the lockdowns and restrictions to on campus teaching brought about by the covid 19 pandemic and highlights the tools and digital visualization technologies that have been successfully developed and used for remote teaching biomedical education for science medical dental and allied health professionals relies on teaching visual and tactile knowledge using practice based approaches this has been delivered for decades via on campus lectures workshops and laboratories teaching practical skills as well as fundamental knowledge and understanding however the arrival of the covid 19 pandemic meant that education across the globe had to pivot very quickly to be able to deliver these skills and knowledge in a predominantly online environment this brought with it many challenges as higher education staff had to adapt to deliver these visual subjects remotely this book addresses the challenges and solutions faced by higher education staff in teaching visual content in distance education chapters include literature reviews original research and pedagogical reflections for a wide range of biomedical subjects degrees such as medicine dentistry and veterinary sciences with examples from undergraduate and postgraduate settings the goal of the book is to provide a compendium of expertise based on evidence gathered during the covid 19 pandemic as well as reflections on the challenges and lessons learned from this dramatic shift in teaching it also presents new examples of best practices that have emerged from this experience to ensure that they are not lost as we return to on campus learning in a new era of biomedical teaching this book will be of interest to anyone looking for a helpful reference point when designing online or blended teaching for visual practice based subjects

Biomedical Visualisation 1995-02-20

design and planning of research and clinical laboratory facilities in this primer professional reference Leonard Mayer demystifies one of the most complex architectural specialties an architect with more than thirty three years experience as a master planner and programmer of laboratories and clinical facilities Mr Mayer offers a comprehensive overview of the fundamental issues related to laboratory planning and design he also provides designers with a clear and rational framework through which to approach this highly challenging and rewarding design specialty a superb learning tool for students and professionals just getting started in lab design and a valuable one volume reference for the experienced professional design and planning of research and clinical laboratory facilities features step by step guidance through the complex maze of codes specifications standards and official guidelines relating to the planning design and construction processes new and updated design criteria based on the most recent laws and regulations master plans facility programs functional programs and requirements programs for a wide variety of scientific and medical disciplines and support facilities comprehensive lists of relevant codes regulations standards guidelines and important architectural structural mechanical electrical and plumbing criteria research and clinical laboratory facilities are perhaps the most complex structures to plan and design intimidated by a vast and seemingly impenetrable body of codes regulations and design criteria pertaining to lab design and construction many architects unfortunately choose to avoid what can be one of the most profitable and professionally rewarding areas of specialization written by an architect with more than thirty three years of experience as a master planner and programmer of laboratories and clinical facilities this book demystifies the process of laboratory planning and design it provides a comprehensive overview of the fundamental issues related to laboratory design and offers readers detailed step by step guidance through the complex maze of design specifications and codes standards and official guidelines that must be addressed during the programming design and construction process focusing mainly on laboratory programming planning and design criteria for wet laboratory environments Leonard Mayer provides examples from numerous master plans facility programs functional programs and requirements programs applicable to a wide variety of scientific and medical disciplines and related facilities related functions and activities include administrative offices computer centers core service and support

building services facilities and more he presents new and updated design criteria based on recent laws and regulations and supplies readers with comprehensive lists of relevant codes regulations standards guidelines and architectural structural mechanical electrical and plumbing criteria design and planning of research and clinical laboratory facilities is an excellent primer for architecture students and newcomers to the field as well as an indispensable single volume reference for experienced professionals it is also an invaluable resource for researchers and investigators facility planners and managers plant engineers and all others involved with the design construction maintenance and administration of laboratory facilities

Design and Planning of Research and Clinical Laboratory Facilities 1962

many scientific structures and systems are named after johannes müller one of the most respected anatomists and physiologists of the 19th century this book tells his story by interweaving it with that of seven of his most famous students

many structures in the human body are named after johannes muller one of the most respected anatomists and physiologists of the 19th century muller taught many of the leading scientists of his age many of whom would go on to make trail blazing discoveries of their own among them were theodor schwann who demonstrated that all animals are made of cells hermann helmholtz who measured the velocity of nerve impulses and rudolf virchow who convinced doctors to think of disease at the cellular level this book tells muller's story by interweaving it with those of seven of his most famous students muller suffered from depression and insomnia at the same time as he was doing his most important scientific work and may have committed suicide at age 56 like muller his most prominent students faced personal and social challenges as they practiced cutting edge science virchow was fired for his political activism jakob henle was jailed for membership in a dueling society and robert remak was barred from prussian universities for refusing to renounce his orthodox judaism by recounting these stories muller's lab explores the ways in which personal life can affect scientists professional choices and consequently affect the great discoveries they make

General Register 1968

a doctor tells his own behind the scenes story of the making of a medical man and the disintegration of an american myth

University of Michigan Official Publication 2007-04-05

the first book to chronicle how innovation in laboratory designs for botanical research energized the emergence of physiological plant ecology as a vibrant subdiscipline laboratory innovation since the mid twentieth century has powered advances in the study of plant adaptation evolution and ecosystem function the phytotron an integrated complex of controlled environment greenhouse and laboratory spaces invented by frits w went in the 1950s set off a worldwide laboratory movement and transformed the plant sciences sharon kingsland explores this revolution through a comparative study of work in the united states france australia israel the ussr and hungary these advances in botanical research energized physiological plant ecology case studies explore the development of phytotron spinoffs such as mobile laboratories rhizotrons and ecotrons scientific problems include the significance of plant emissions of volatile organic compounds symbiosis between plants and soil fungi and the discovery of new pathways

for photosynthesis as an adaptation to hot dry climates the advancement of knowledge through synthesis is a running theme linking disciplines combining laboratory and field research and moving across ecological scales from leaf to ecosystem the book also charts the history of modern scientific responses to the emerging crisis of food insecurity in the era of global warming

Müller's Lab 2006

this book introduces and explores a new genre lab lit essays both discuss lab lit novels using a variety of analytical approaches as well as provide a theoretical framework to explore the social and literary backgrounds of the genre

the lead author of eight successful previous editions has brought together a team that combined has well over 60 years experience in offering beginning biology labs to several thousand students each year at iowa state university their experience and diverse backgrounds ensure that this extensively revised edition will meet the needs of a new generation of students designed to be used with all majors level general biology textbooks the included labs are investigative using both discovery and hypothesis based science methods students experimentally investigate topics observe structure use critical thinking skills to predict and test ideas and engage in hands on learning students are often asked what evidence do you have that in order to encourage them to think for themselves by emphasizing investigative quantitative and comparative approaches to the topics the authors continually emphasize how the biological sciences are integrative yet unique an instructor s manual available through mcgraw hill lab

central provides detailed advice based on the authors experience on how to prepare materials for each lab teachings tips and lesson plans and questions that can be used in quizzes and practical exams this manual is an excellent choice for colleges and universities that want their students to experience the breadth of modern biology
