high and rapidly rising health care costs in the united states and growing ranks of uninsured persons have brought health care reform to the top of the u s administration s policy agenda this paper describes the health care financing system in the united states highlights what are viewed as its most serious shortcomings and explores possible reasons for high and rising medical care costs after brief descriptions of alternative reform proposals the paper discusses universal coverage under managed competition and its ability to deal with the equity and efficiency problems in the u s health care system report of a conference on health care reform with papers by b abel smith b jonsson h aaron a j dunning j m wiener b nolan and r evans issues discussed include effectiveness and equity market regulation technological change are advanced industrialized countries converging on a market response to reform their systems of social protection by comparing the health care reform experiences of britain germany and the united states in the 1990s susan giamo explores how countries pursue diverse policy responses and how such variations reflect distinctive institutions actors and reform politics in each country in britain the thatcher government s plan to inject a market into the state administered national health service resulted in a circumscribed experiment orchestrated from above in germany the kohl government sought to repair defects in the corporatist arrangement with doctors and insurers thus limiting the market experiment and designing it to enhance the solidarity of the national health insurance system in the united states private market actors foiled clinton s bid to expand the federal government s role in the private health care system through managed competition and national insurance but market reform continued albeit led by private employers and with government officials playing a reactive role actors and institutions surrounding the existing health care settlement in each country created particular reform politics that either militated against or fostered the deployment of competition the finding that major transformations are occurring in private as well as public systems of social protection suggests that studies of social policy change expand their focus beyond statutory welfare state programs the book will interest political scientists and policymakers concerned with welfare state reform in advanced industrial societies social scientists interested in the changing balance among state market and societal interests in governance and health policy researchers health policymakers and health care professionals susan giamo is an independent scholar she completed her ph d in political science at the a unique developmental age distinct from both childhood and adulthood with special vulnerabilities health concerns and barriers to accessing health care it is also an opportune time for prevention because adolescents are critical to the future health and well being of the country a focus on adolescent care is an important part of health care reform the essential elements of health care reform for adolescents that should be included in reform legislation and implementation are 1 ensuring access to care 2 benefits and cost sharing 3 attention to the needs of special populations 4 training to meet the needs of adolescents and 5 responding to public health needs the six papers in this report address each of these essential elements the papers are 1 adolescents the health care delivery of health care cindy mann 4 adolescents and health care reform protecting special populations abigail english 5 training in the era of health care reform karen hein and 6 health care reform and adolescent health the anticipated role and contribution of public health claire brindis most of the papers contain references and four appendices are included tjq it is easy for reformers and their overseas advisers to develop conceptually strong plans for health sector reform that appeal to governments donors and academics transforming these plans into successful action has proved to be extremely difficult toward the goal of improving assistance to this sector the economic development institute edi of the world bank held a seminar in ashgabat turkmenistan in june 1996 this publication provides a summary of the proceedings and papers presented at that seminar it was attended by delegations from five countries in central asia and from azerbaijan and mongolia the content of this volume emphasizes topics central to the restructuring of health sector

financing and health care delivery systems at a time of transition to market economies and to democracy maintaining and improving the health status of the population while preventing rapid escalation of health care expenditure were the recurrent themes throughout the seminar this volume examines the two models of health care reform managed competition and internal markets that are increasingly becoming the dominant paradigm in european and north american policy the united states spends more money on health care by far than any other country and yet nearly 50 000 000 americans are uninsured at least part of the time each year health care reform now is written for anyone who cares enough about our health care situation to consider serious alternatives to the current system in this book george halverson an internationally known health care leader and author offers a sensible approach to health care reform and universal coverage that can work for all stakeholders step by step george halverson outlines a game plan for a truly world class health care system that will appeal to policy makers on both ends of the political spectrum and will deliver health care with improved quality better access provider accountability performance transparency consumer choice and individual empowerment sweeping changes are being proposed as Canadians examine our health care system but what are the legal implications of health care reform in this timely collection lawyers and legal scholars discuss a variety of topics in health care reform including regulation of private care interpretation of the Canada Health Act and the constitutional implications of proposed reforms Barbara von Tigerstrom is currently studying at the University of Cambridge in England Timothy Caulfield lives in Edmonton where he teaches at the University of Alberta Strong Primary Health Care Systems are the Foundation of Effective Health Care Several countries have attempted to reform primary care delivery in the past few years with variable results in implementing primary care reform the authors examine the barriers to and facilitators of such reform in Canada New Zealand and the United Kingdom from political economic organizational and clinical perspectives the authors emphasize the importance of primary care in improving health increasing cost effectiveness and promoting social equity contributors include Marie Dominique Beaulieu University of Montreal Raisa Deber University of Toronto Michael Decter National Health Council Cathy Fooks Health Network Canadian Policy Research Networks Brian Hutchinson McMaster University Antonia Maioni McGill University Nick Mays London School of Hygiene and Tropical Medicine Bonnie Sibbald University of Manchester Barbara Starfield Johns Hopkins University and Carolyn Tuohy University of Toronto The third in a three volume report on the aged care reform strategy this book consists of eight discussion papers presenting accounts of policy program developments over the last five years includes chapters on caring for the ethnic aged dementia care and care of older aboriginals and Torres Strait Islanders using cross country analysis and case studies this book provides new insights and potential policy responses for the key fiscal policy challenges that both advanced and emerging economies will be facing this paper exploits the staggered adoption of major concurrent health reforms in countries in Europe and Central Asia after 1990 to estimate their impact on public health expenditure utilization and avoidable deaths while the health systems all derived from the same paradigm under central planning they have since introduced changes to policies regarding cost sharing provider payment financing and the rationalization of hospital infrastructure social health insurance is predicted to increase this share although the leads of both social health insurance and primary care fee for service suggest endogeneity may be an issue with the outpatient share regressions provider payment reforms produce the largest impact on spending with fee for service increasing spending and patient based payment reducing it the impact on avoidable deaths is generally negligible but there is some evidence of improvements due to fee for service considering the corresponding relative reduction in inpatient admissions and the incentives fee for service provides to deliver additional services perhaps there is an overprovision of services in the primary care setting and an underutilization of more specialized hospital services arguing that health care should be a human right rather than a commodity the distinguished contributors to this volume call for a new social covenant establishing a right to a standard of health care consistent with society's level of resources by linking rights with limits they offer a framework for seeking national consensus on a cost conscious standard of universal medical care the authors identify the policy implications of recognizing and implementing such a right and develop specific criteria to measure the success of health care reform from a human rights perspective health care reform also offers specific and timely criticism of managed competition and its offspring the Clinton plan for health care reform because health care reform will inevitably be an ongoing process of assessment and revision especially since managed competition has not been implemented elsewhere this book will last beyond the moment by providing vital standards to guide the future evolution of the health care system health care reform simplified what professionals in medicine government insurance and business need to know describes the patient protection and affordable
