energy climate change and agriculture are closely interlinked and the introduction of renewable energy interventions in the agriculture sector can catalyse poverty reduction and climate change mitigation the agricultural is an important sector of the economy for uzbekistan as it employ over 26 percent of the total working population uzbekistan has universal access to energy in addition to significant fossil fuel resources which are supported by a well extended energy distribution network however the energy sector faces several challenges due to inefficient and outdated infrastructure resulting in high losses as well as power outages especially in rural areas access to stable energy is essential to rural farmers especially for irrigation as the impact of climate change is expected to intensify in the near future this report is part of the technical analysis that informs the gef's project preparation grant application ppg under the gef's food system land use and restoration folur impact programme the focus of the analysis is on three regions of uzbekistan the

republic of karakalpakstan kashkadarya and khorezm firstly the report provides an overview of solar energy wind energy and specific elements of bioenergy potential building on this the report identifies specific renewable energy interventions that can enhance the agriculture production of wheat landscapes in the selected regions in uzbekistan in addition to the wheat value chain the alfalfa dairy and horticulture chains were identified as important chains for the country and the specific regions being considered furthermore the assessment provides details on the specific types of renewable energy interventions that could be implemented for the specific value chains under evaluation as well as the related costs and investment requirements these interventions can help stabilize access to energy for farmers and overcome some of the current access shortages

this title is the first comprehensive book on sampling and modern sample preparation techniques and has several main objectives to facilitate recognition of sample preparation as both an integral part of the analytical process to present a fundamental basis and unified theoretical approach for the professional development of sample preparation to emphasize new developments in sample preparation technology and to highlight the future impact of sample preparation on new directions in analytical science particularly automation miniaturization and field implementation until recently there has been relatively little scientific interest in sampling and sample preparation however this situation is presently changing as sampling and sample preparation become integral parts of the analytical process with their own unique challenges and research opportunities sampling and sample preparation for field and laboratory is an essential resource for all analytical chemists and in particular those involved in method development not only does it cover the fundamental aspects of extraction it also covers applications in various matrices and includes sampling strategies and equipment and how these can be integrated into the

technologies and approaches to reducing the fuel consumption of medium and heavy duty vehicles evaluates various technologies and methods that could improve the fuel economy of medium and heavy duty vehicles such as tractor trailers transit buses and work trucks the book also recommends approaches that federal agencies could use to regulate these vehicles fuel consumption currently there are no fuel consumption standards for such vehicles which account for about 26 percent of the transportation fuel used in the u s the miles per gallon measure used to regulate the fuel economy of passenger cars is not appropriate for medium and heavy duty vehicles which are designed above all to carry loads efficiently instead any regulation of medium and heavy duty vehicles should use a metric that reflects the efficiency with which a vehicle moves goods or passengers such as gallons per ton mile a unit that reflects the amount of fuel a vehicle would use to carry a ton of goods one mile this is called load specific fuel consumption lsfc the book estimates the improvements that various technologies could achieve over the next decade in seven vehicle types for example using advanced diesel engines in tractor trailers could lower their fuel consumption by up to 20 percent by 2020 and improved aerodynamics could yield an 11 percent reduction hybrid powertrains could lower the fuel consumption of vehicles that stop frequently such as garbage trucks and transit buses by as much 35 percent in the same time frame
