what is combinatorics anyway broadly speaking combinatorics is the branch of mathematics dealing with different ways of selecting objects from a set or arranging objects it tries to answer two major kinds of questions namely counting questions how many ways can a selection or arrangement be chosen with a particular set of properties and structural questions does there exist a selection or arrangement of objects with a particular set of properties the authors have presented a text for students at all levels of preparation for some this will be the first course where the students see several real proofs others will have a good background in linear algebra will have completed the calculus stream and will have started abstract algebra the text starts by briefly discussing several examples of typical combinatorial problems to give the reader a better idea of what the subject covers the next chapters explore enumerative ideas and also probability it then moves on to enumerative functions and the relations between them and generating functions and recurrences important families of functions or numbers and then theorems are presented brief introductions to computer algebra and group theory come next structures of particular interest in combinatorics posets graphs codes latin squares and experimental designs follow the authors conclude with further discussion of the interaction between linear algebra and combinatorics features two new chapters on probability and posets numerous new illustrations exercises and problems more examples on current technology use a thorough focus on accuracy three appendices sets induction and proof techniques vectors and matrices and biographies with historical notes flexible use of mapletm and mathematicatm

described by the author as a slightly autobiographical and heavily biased book about investing simple but not easy won fans among both professional and private investors alike when first released in 2007 the theme of the book is that investment is simpler than non professionals think it is in that the rudiments can be expressed in ordinary english and picked up by anybody it is not a science but investment is also difficult people on the outside tend to think that anyone on the inside should be able to do better than the market indices this is not so picking the managers who are likely to do better is a challenge richard oldfield begins with a detailed confession of some of his worst mistakes and what they have taught him he discusses the different types of investment why fees matter and the importance of measuring performance properly he also outlines what to look for and what not to look for in an investment manager when to fire a manager and how to be a successful client a cult classic for its candid confessions and sparkling wit this extended edition of simple but not easy featuring a new author s preface and a substantial afterword remains an indispensable companion for all those interested in the rewarding but enigmatic pursuit of investing
