**Similarity and Analogical Reasoning** 1989 similarity and analogy are fundamental in human cognition they are crucial for recognition and classification and have been associated with scientific discovery and creativity any adequate understanding of similarity and analogy requires the integration of theory and data from diverse domains this interdisciplinary volume explores current development in research and theory from psychological computational and educational perspectives and considers their implications for learning and instruction the distinguished contributors examine the psychological processes involved in reasoning by similarity and analogy the computational problems encountered in simulating analogical processing in problem solving and the conditions promoting the application of analogical reasoning in everyday situations

**Preference, Belief, and Similarity** 2003-11-21 amos tversky 1937 1996 a towering figure in cognitive and mathematical psychology devoted his professional life to the study of similarity judgment and decision making he had a unique ability to master the technicalities of normative ideals and then to intuit and demonstrate experimentally their systematic violation due to the vagaries and consequences of human information processing he created new areas of study and helped transform disciplines as varied as economics law medicine political science philosophy and statistics this book collects forty of tversky s articles selected by him in collaboration with the editor during the last months of tversky s life it is divided into three sections similarity judgment and preferences the preferences section is subdivided into probabilistic models of choice choice under risk and uncertainty and contingent preferences included are several articles written with his frequent collaborator nobel prize winning economist daniel kahneman

**Similarity Search and Applications** 2017-09-25 this book constitutes the refereed proceedings of the 10th international conference on similarity search and applications sisap 2017 held in munich germany in october 2017 the 23 full papers presented were carefully reviewed and selected from 53 submissions the papers deal with issues surrounding the theory design analysis practice and application of content based and feature based similarity search they are organized in the following topical sections approximate similarity search improving similarity search methods and applications distances for complex objects outlier detection indexing and applications and applications and specific domains the paper a new perspective on the tree edit distance is published open access under a cc by 4 0 license at link springer com

**Self-Similar Groups** 2024-04-05 self similar groups groups generated by automata appeared initially as examples of groups that are easy to define but that enjoy exotic properties like nontrivial torsion intermediate growth etc the book studies the self similarity phenomenon in group theory and shows its intimate relation with dynamical systems and more classical self similar structures such as fractals julia sets and self affine tilings the relation is established through the notions of the iterated monodromy group and the limit space which are the central topics of the book a wide variety of examples and different applications of self similar groups to dynamical systems and vice versa are discussed it is shown in particular how julia sets can be reconstructed from the respective iterated monodromy groups and that groups with exotic properties appear now not just as isolated examples but as naturally defined iterated monodromy groups of rational functions the book is intended to be accessible to a wide mathematical readership including graduate students interested in group theory and dynamical systems

**Similarity Search and Applications** 2022-09-27 this book constitutes the refereed proceedings of the 15th international conference on similarity search and applications sisap 2022 held in bologna italy in october 2022 sisap 2022 is an annual international conference for researchers focusing on similarity search challenges and related theoretical practical problems as well as the design of content based similarity search applications the 15 full papers presented together with 8 short and 2 doctoral symposium papers were carefully reviewed and selected from 34 submissions they were organized in topical sections as follows applications foundations indexing and clustering learning doctoral symposium

**Operators for Similarity Search** 2015-07-07 this book provides a comprehensive tutorial on similarity operators the authors systematically survey the set of similarity operators primarily focusing on their semantics while also touching upon mechanisms for processing them effectively the book starts off by providing introductory material on similarity search systems highlighting the central role of similarity operators in such systems this is followed by a systematic categorized overview of the variety of similarity operators that have been proposed in literature over the last two decades including advanced operators such as rknn reverse k ranks skyline k groups and k n match since indexing is a core technology in the practical implementation of similarity operators various indexing mechanisms are summarized finally current research challenges are outlined so as to enable interested readers to identify potential directions for future investigations in summary this book offers a comprehensive overview of the field of similarity search operators allowing readers to understand the area of similarity operators as it stands

today and in addition providing them with the background needed to understand recent novel approaches

*Scrip and Similar Rights* 1965 considers s 2321 to revise procedure for satisfying claims arising out of scrip lieu selection and similar right

**Similarity and Compatibility in Fuzzy Set Theory** 2013-06-05 assessing the degree to which two objects an object and a query or two concepts are similar or compatible is a fundamental component of human reasoning and consequently is critical in the development of automated diagnosis classification information retrieval and decision systems the assessment of similarity has played an important role in such diverse disciplines such as taxonomy psychology and the social sciences each discipline has proposed methods for quantifying similarity judgments suitable for its particular applications this book presents a unified approach to quantifying similarity and compatibility within the framework of fuzzy set theory and examines the primary importance of these concepts in approximate reasoning examples of the application of similarity measures in various areas including expert systems information retrieval and intelligent database systems are provided

**The Wave Theory of Difference and Similarity** 2020-03-09 two experimental procedures prompted the empirical development of psychophysical models those that measure response frequency often referred to as response probability and those that measure response time sometimes referred to as reaction time the history of psychophysics is filled with theories that predict one or the other of these two responses yet the persistent reappearance of empirical relationships between these two measures of performance makes clear the need for a theory that both predicts and relates these two measures most likely both response measures are the result of a single process that generates empirical laws relating response time and response probability it is this process its theory description and application that is the topic of the wave theory of difference and similarity originally published in 1992 the author of this book has set out to provide a theoretical foundation for formulating new theories that systematize earlier results and to stimulate new concepts and introduce new tools for exploring mental phenomena and improving mental measurement

**Simulation and Similarity** 2013-02-14 this book is an account of modeling and idealization in modern scientific practice focusing on concrete mathematical and computational models the main topics of this book are the nature of models the practice of modeling and the nature of the relationship between models and real world phenomena in order to elucidate the model world relationship weisberg develops a novel account of similarity called weighted feature matching

*Scaling, Self-similarity, and Intermediate Asymptotics* 1996-12-12 scaling laws reveal the fundamental property of phenomena namely self similarity repeating in time and or space which substantially simplifies the mathematical modelling of the phenomena themselves this book begins from a non traditional exposition of dimensional analysis physical similarity theory and general theory of scaling phenomena using classical examples to demonstrate that the onset of scaling is not until the influence of initial and or boundary conditions has disappeared but when the system is still far from equilibrium numerous examples from a diverse range of fields including theoretical biology fracture mechanics atmospheric and oceanic phenomena and flame propagation are presented for which the ideas of scaling intermediate asymptotics self similarity and renormalisation were of decisive value in modelling

**Enhancing Similarity Measures with Imperfect Rule-based Background Knowledge** 2006 considers legislation to satisfy claims arising from issuance of scrip or from lieu selection and similar rights for public land allotments granted for services performed for or for property acquired by u s

*Scrip, Lieu Selection, and Similar Rights* 1965 virtually every jurisdiction today is busy developing private international law rules to deal with trusts and similar ring fenced structures with the increasing impact of globalisation business interests throughout the world are intent on maximising the potential of such structures for raising funds lowering risks and cutting costs as a result numerous complex issues involving the traditional categories of settlor beneficiary and fiduciary are being radically transformed extending the boundaries of trusts and similar ring fenced funds offers valuable analyses by sixteen well known authorities in the field of a broad range of trust related issues the many important insights in this book reveal the workings of such issues as the following the disappearing divergence between common law and civil law jurisdictions in the matter of trusts using the segregated fund concept to manage the risk of insolvency the demise of the amateur trustee in the charitable trust sector why loss to the fund supersedes particular losses of beneficiaries the legal dimensions of hiding ownership by giving

property to trustees the intervention of public policy in questions of perpetuity the selective imposition of oecd and ftf transparency initiatives on offshore jurisdictions and policing of trustee behaviour by beneficiaries lawyers bankers and others dealing with investment and business finance will find much information as well as food for thought in this fascinating book as will those involved in the traditional trust industry whether as trustees or lawyers or fund managers most of the essays in this outstanding thematic collection were originally prepared for presentation at a conference held in 2001 at king s college london

The Use of Polygraphs and Similar Devices by Federal Agencies 1974 this book provides an enlightening comparative analysis of japan s and italy s political cultures and systems economics and international relations from world war ii to the present day it addresses a variety of fascinating questions ranging from the origins of the authoritarian regimes and post war one party rule in both countries through to japan s and italy s responses to the economic and societal challenges posed by globalization and their international ambitions and strategies similarities and differences between the two countries with regard to economic development models the relationship of politics and business economic structures and developments and international relations are analyzed in depth this innovative volume on an under researched area will be of great interest to those with an interest in italian and japanese politics and economics

**The Use of Polygraphs and Similar Devices by Federal Agencies** 1974 the definitive resource for teaching kids with asperger syndrome the life skills that build independence confidence and self esteem children with autism spectrum disorders learn differently our kids choices are too often limited and their paths to success restricted not by a lack of intellectual ability but by deficits in acquiring applying and generalizing basic life skills success in school at home on the playground and beyond depends on mastering countless basic living skills that most other kids just pick up almost by osmosis this book shows parents how to teach these so called easy skills to complex learners this is the first book for parents and caregivers of kids with asperger syndrome and similar learning profiles that features strategies based on applied behavior analysis the most widely accepted evidence based and effective teaching method for learners with asds including how to identify critical skills appropriate for your child s age how to teach them and why implement new techniques that can replace mimic prompt override or impose missing order on your child s learning style design a curriculum for your child that reduces reliance on prompts including parents and promotes new learning new behaviors and independence

**Postal Reform, Hearings ... 91-2, on H.R. 17070, and Similar Bills. April 22, 23, and 27, 1970** 1970 this paper studies the following three problems 1 when does a measure on a self similar set have the volume doubling property with respect to a given distance 2 is there any distance on a self similar set under which the contraction mappings have the prescribed values of contractions ratios 3 when does a heat kernel on a self similar set associated with a self similar dirichlet form satisfy the li yau type sub gaussian diagonal estimate these three problems turn out to be closely related the author introduces a new class of self similar set called rationally ramified self similar sets containing both the sierpinski gasket and the higher dimensional sierpinski carpet and gives complete solutions of the above three problems for this class in particular the volume doubling property is shown to be equivalent to the upper li yau type sub gaussian diagonal estimate of a heat kernel
