Clinical Ocular Pharmacology Second Edition covers the diagnostic and therapeutic clinical procedures in the administration of drugs to the eye. This book is organized into five parts encompassing 35 chapters that evaluate the basic pharmacologic principles that govern the different types of ophthalmic drugs. It addresses the pharmacologic agents useful in the diagnosis and treatment of ocular diseases. Some of the topics covered in the book are the basic science of ocular pharmacology, clinical administration of ocular drugs, drugs affecting the autonomic nervous system, types of local anesthetics, review of anti-inflammatory drugs and examination of inhibitors of aqueous formation. Other parts deal with the development of contact lens solution in clinical practice and the pharmacologic management of strabismus. These topics are followed by discussions of the legal basis of using drugs in optometry and the systemic effects of ocular drugs. The concluding part is devoted to the diseases of the optic nerve. The book can provide useful information to doctors, optometrists, pediatricians, students, and researchers.

Applied Virology covers the practical applications of the developments in basic virology not only to virology but to other disciplines as well and demonstrates the impact of virus diseases on the environment, economy, and the health of man, animals, and plants. The book discusses topics on new virus vaccine technology and chemotherapy, the status of vaccination against viral diseases, and the epidemiology and diagnosis of viral diseases. The text provides information on the strategy used to produce virus vaccines, on antiviral chemical compounds, on simple, rapid, and specific diagnostic techniques, and on epidemiology in relation to the prevention and control of virus diseases. Noninfectious synthesized peptides used as safe virus vaccines are reviewed with special attention to their immunogenicity, multispecificity, and usefulness in case of epidemics. Virologists will find the book useful.
