Socio-economic Parameters of Eggplant Pest Control in Jessore District of Bangladesh

2003

the production of food crops helps us meet the basic need of human nutrition the world s population now exceeds 7 billion people and continues to grow alongside this growth the human demand for food also increases rapidly crop production is becoming increasingly intensive and large scale and as a result simplified landscape systems form crop production in simplified agricultural landscapes often face or suffer from various threats such as pest damage caused by diseases insect pests weeds and rodents or a shortage of pollinators these pests can cause serious damage to seeds germination growth breeding and maturity during crop production and food storage however effective pest management can help to reduce crop loss most crops in particular fruit trees and vegetables require insect pollination to ensure high yields and high quality research into ecosystem services and their potential impact on pest control and pollination in agricultural landscapes is of great significance to sustainable crop production simplified and intensive agricultural landscapes can support crop production but often have reduced biodiversity as monoculture cropping systems have limited surrounding natural habitat this lack of natural surrounding habitat leads to the loss of ecosystem service benefits such as natural pest control and pollination over the past few decades pest control has largely relied on chemical pesticides which can control pests and reduce crop losses in the short term however chemical pesticides cause a number of problems in the long run for example pest resistance to pesticides and residues of pesticides in soil water and agricultural products excessive improper and long term use of pesticides during crop production ultimately harms human health and biodiversity especially beneficial microbes natural enemies and pollinators to achieve and ensure food security food safety and ecological security new theories methods practice and application patterns need to be developed for environmentally friendly pest control and maintenance of pollination in agricultural landscapes for sustainable food production the aim of this research topic is to promote the sustainable management of crop production and ecological environment protection through the discussion of crop pest control and pollination and the publication of original research articles and reviews of research and theory we welcome high quality and original contributions that present original papers on basic and applied research covering aspects of natural pest control and pollination coverage for this research topic includes the biology and ecology of pollinators including wild and managed organisms including parasitoids invertebrate and vertebrate predators of insect pest and plants mites plant and insect pathogens nematodes and weeds used for biological control and aspects of use including biological control agents for integrated pest management on food crops fruits and vegetables in agricultural landscapes natural pest control is an environmentally beneficial and effective means of reducing or mitigating pests and pest damage through the use of natural enemies ecological ethological molecular and biotechnological approaches to the understanding of natural pest control and pollination in agricultural landscapes and welcome other

Implementation and Promotion of an IPM Strategy for Control of Eggplant Fruit and Shoot Borer in South Asia

2006

the book biocontrol of brinjal pest with predator species written by l kalaiyarasi is a comprehensive guide to sustainable pest control in agriculture focusing on the brinjal or eggplant crop and its main pest the brinjal fruit and shoot borer leucinodes orbonalis the book explores the use of predator species as biological control agents to manage insect pests integrated pest management is the main approach advocated in the book and the use of natural enemies of insect pests is a key component of this approach the book covers various predator species such as parasitic wasps predatory mites lady beetles lacewings praying mantises and trichogramma wasps as well as entomopathogenic nematodes and fungi it also discusses the principles of insect ecology and behavior beneficial insects insect population dynamics and insectary management the book emphasizes the importance of an ecological approach to pest control which promotes the balance between pest and predator populations and encourages the use of non toxic pest control methods it also discusses the negative impacts of chemical control and the benefits of natural pest control for crop protection agricultural biodiversity and environmental protection overall this book is a valuable resource for farmers researchers and students interested in biocontrol and sustainable farming practices it provides a practical and informative guide for eggplant pest management crop health and agricultural sustainability

Development of an Integrated Pest Management Strategy for Eggplant Fruit and Shoot Borer in South Asia

2003-12-01

discusses pest control

Insect and Mite Pests on Eggplant

2009

the crop plants cater not only to our basic f5 food feed fiber fuel and furniture needs but also provide a number of nutraceuticals with potential nutritional safety and therapeutic properties many crop plants provide an array of minerals vitamins and antioxidant rich bioactive phytochemicals increasing incidences of chronic diseases such as cancer diabetes and hiv and malnutrition necessitate global attention to health and nutrition security with equal emphasis to food security this compendium compiles results of researches on biochemical physiological and genetic mechanisms underlying biosynthesis of the health and nutrition related nutraceuticals it also explores the precise breeding strategies for augmentation of their content and amelioration of their quality in crop plants under all commodity categories including cereals and millets oilseeds pulses fruits and nuts and vegetables the compendium comprise 5 sections dedicated to these 5 commodity groups and presents enumeration on the concepts strategies tools and techniques of nutraceutomics these sections include 50 chapters devoted to various major crops
2023-04-17 these chapters present deliberations on the biochemical and medicinal

classical genetics and breeding for their quantitative and qualitative improvement tissue culture and genetic engineering for augmentation of productivity and quality and sources of genes underlying their biosynthesis they also include comprehensive enumeration on genetic mapping of the genes and qtls controlling the contents and profile of the nutraceuticals and molecular breeding for their further improvement through marker assisted selection and backcross breeding tools prospects of post genomic precise breeding strategies including genome wide association mapping genomic selection allele mining and genome editing are also discussed this compendium fills the gap in academia and research and development wings of the private sector industries interested in an array of subjects including genetics genomics tissue culture genetic engineering molecular breeding genomics assisted breeding bioinformatics biochemistry physiology pathology entomology pharmacognosy ipr etc and will also facilitate understanding of the policy making agencies and people in the socio economic domain and research sponsoring agencies

Socio-economic Parameters of Pesticide Use and Assessment of Impact of an IPM Strategy for the Control of Eggplant Fruit and Shoot Borer in West Bengal, India

2006

the international centre for advanced mediterranean agronomic studies ciheam established in 1962 is an intergovernmental organization of 13 countries albania algeria egypt france greece italy lebanon malta morocco portugal spain tunisia and turkey four institutes bari italy chania greece montpellier france and zaragoza spain provide postgraduate education at the master of science level ciheam promotes research networks on mediterranean agricultural priorities supports the organization of specialized education in member countries holds seminars and workshops bringing together technologists and scientists involved in mediterranean agriculture and regularly produces diverse publications including the series options méditerranéennes through these activities ciheam promotes north south dialogue and international co operation for agricultural development in the mediterranean region over the past decade the mediterranean agronomic institute of zaragoza has developed a number of training and research supporting activities in the field of agroecology and sustainability of agricultural production systems some of these activities have been concerned with the rational use of pesticides and more particularly with the implementation of integrated control systems in order to gain in efficacy and decrease both the environmental impact and the negative repercussions for the commercialization of agricultural products

Development and Implementation of Integrated Pest Management Systems in Eggplant and Capsicum

2005

as food demand has grown worldwide agricultural production has intensified with a concomitant expansion in pesticide use concerns over pesticide induced health and environmental problems increased pest resistance to pesticides and continued losses due to pests have stimulated the search for alternative pest management solutions as a result integrated pest management ipm approaches have been developed and applied that rely on genetic cultural biological and information intensive pest management alternatives this book presents and critiques the participatory approaches that can be used to globalize ipm it describes the development deployment and evaluation of participatory ipm all the chapters include perspectives from both the us and

Bibliography of Agriculture

1967

the director of cheyenne botanic gardens and author of the bountiful solar greenhouse has produced a practical comprehensive guide to making the most of any greenhouse or garden room addressing almost every aspect except the actual construction smith covers the greenhouse environment light humidity temperature interior design plant placement fans drainage individual plants and their propagation pollination growth and scheduling for flower or fruit production there are chapters on problems diseases and insects and lists of associations mail order suppliers and sun averages during the year across the country as a wyoming gardener he puts a good deal of emphasis on using the greenhouse in summer as well as in winter but this is a useful practical guide for readers in most of the continental united states

Crop Pest Control and Pollination, volume II, 2nd edition

2023-12-01

the book begins by establishing an economic framework upon which to apply the principles of ipm then it looks at the entomological applications of economics specifically economic analyses concerning chemical biological cultural and genetic control tactics as well as host plant resistance and the cost of sampling lastly it evaluates whether the control provided by a traditional ipm system is sufficient or if changes to the system design would yield greater benefits

Biocontrol of Brinjal Pest with Predator Species

2024-01-15

it is an edited book with chapters written by multi disciplinary specialists in their specific subject areas it covers development of ipm components and packaging them for individual vegetable crops specifically targeted to tropical countries scientific background for ipm components or tactics will be included there will be case studies of ipm packages developed and implemented in different countries the concept of ipm has been in existence for the past six decades however a practical holistic program has not been developed and implemented for vegetable crops in the developing countries currently the ipm adoption rate in the tropics is minimal and there is a need for implementation of ipm technologies that are environmentally safe economical and socially acceptable we believe that adoption and implementation of ipm provided in this book will lead to significant reduction in crop losses and mitigate adverse impacts of pesticide use in the tropics this book is an outcome of

Tomato, Capsicum, Chilli and Eggplant

2013

integrated pest management is an effective and environmentally sensitive approach that relies on a combination of common sense practices its programs use current and comprehensive information on the life cycles of pests and their interactions with the environment this information in combination with available pest control methods is used to manage pest damage by the most economical means and with the least possible hazard to people property and the environment

The Organic Gardener's Handbook of Natural Insect and Disease Control

1996-05-15

as the world debates the risks and benefits of plant biotechnology the proportion of the global area of transgenic field crops has increased every year and the safety and value continues to be demonstrated yet despite the success of transgenic field crops the commercialization of transgenic horticultural crops vegetables fruits nuts and or

Illinois Agricultural Pest Control Handbook

1995

this book covers advanced concepts and creative ideas with regard to insect biorational control and insecticide resistance management some chapters present and summarize general strategies or tactics for managing insect pests such as the principles of ipm in various crop systems and biorational control of insect pests advances in organic farming alternative strategies for controlling orchard and field crop pests other chapters cover alternative methods for controlling pests such as disruption of insect reproductive systems and utilization of semiochemicals and diatomaceous earth formulations and developing bioacoustic methods for mating disruption another part is devoted to insecticide resistance mechanisms and novel approaches for managing insect resistance in agriculture and in public health

Biologic and Economic Assessment of Methyl Bromide

1993

through green revolution in late 1960s india achieved self sufficiency in food production but still the country has not achieved self sufficiency in production of horticultural crops most of the growth in food production during the green revolution period is attributed to the use of higher levels of fertilizers and pesticides which are continuing to destroy stable traditional ecosystems the challenge before the crop protection scientist is to increase yields from the existing land without harming the environment and resource base this can be achieved by adopting eco friendly biointensive integrated pest management bipm strategy bipm incorporates ecological and economic factors into agricultural system design and decision making and addresses public concerns about environmental quality and food safety the benefits of implementing bipm can include reduced chemical input costs reduced on farm and off farm environmental impacts and more effective and sustainable pest management an ecology based ipm has the potential of decreasing inputs of fuel machinery and synthetic chemicals all of which are energy intensive and increasingly costly in terms of financial and environmental impact such reductions will benefit the grower and society the present book deals with the most recent biointensive integrated approaches for pest management utilizing components such as bioagents predators parasitoids and pathogens bacteria fungi viruses botanicals biofumigation oil cakes fym compost crop residues green manuring and other organic amendments arbuscular mycorrhizal fungi physical methods hot water treatment of planting material soil solarization cultural methods crop rotation summer ploughing fallowing intercropping pruning mulching spacing planting date trap cropping etc biorational chemicals pheromones and resistant cultivars this book can serve as a useful reference to policy makers research and extension workers practicing farmers and students the material can also be used for teaching post graduate courses
