A Workbook on Human Spermatozoa and Assisted Conception

2012-12-15

this is the 1st edition of the book a workbook on human spermatozoa and assisted conception the text is comprehensive updated and fully revised as per the present day requirements in the subject of assisted conception the book has 17 chapters classified into twelve sections the first chapter deals with equipments and culture media used in semen analysis subsequent two chapters are computer assisted semen analysis which provides a comprehensive description of human semen analysis with the help of well illustrated diagrams in a user friendly language a sound foundation of understanding of sperm morphology and semen preparation is provided in the next three chapters giving details of semen ejaculate semen extract and semen preparation of infected semen sample in simple text and easy to understand illustrations along with recent advances oxidative stress test is described in chapter 10 the chapter 11 to 14 deal with different tests done on sperms chapter fifteen describes oocyte spindle imaging system the chapter 16th and 17th deal with semen banking and vitrification a comprehensive index is given at last

Practical Problems in Assisted Conception

2018-09-20

practical and effective this book supports challenging clinical and laboratory issues that the ivf practitioner faces all day every day

Infertility and Assisted Conception

1993

this book results from a study by a committee of the institute of medicine and the national research council s board on agriculture the committee examined the scientific foundations of medically assisted conception and developed an agenda for basic research in reproductive and developmental biology that would contribute to advances in the clinical and agricultural practice of in vitro fertilization and embryo transfer the volume also discusses some barriers to progress in research and ways of lowering them and explains the scientific issues important to ethical decision making

Medically Assisted Conception

1989-02-01

embarking on ivf or any assisted fertility treatment can be a very demanding and stressful experience but the right physical nutritional and emotional support can lessen

these stresses and strains and increase your chances of success in zita west's guide to fertility and assisted conception leading fertility and pregnancy expert zita west offers an in depth explanation of all aspects of fertility and uniquely addresses the issues involved in using assisted conception in her clear yet sensitive style zita explains all aspects of fertility from preconception and trying naturally through to assisted conception what is involved in the ivf process how to prepare your body to increase your chances of conceiving successfully the importance of a proactive approach to diet and nutrition how complementary therapies such as acupuncture can increase your chances of success including interviews with leading experts in the field case histories from patients and zita's own holistic principles this is an invaluable guide for the growing number of people who are considering or have already embarked on medical intervention to enable them to conceive

Zita West's Guide to Fertility and Assisted Conception

2010-07-28

first published in 2003 routledge is an imprint of taylor francis an informa company

Third Party Assisted Conception Across Cultures

2004

to many patients and indeed health care professionals ivf is the ultimate treatment for infertility however in many cases ivf is not feasible and may not be indicated ivf remains a largely inefficient procedure that often does not succeed in achieving a pregnancy there remains a strong place for other fertility interventions many of them surgical in nature surgical interventions can be used as a stand alone fertility treatment or as an adjuvant treatment used in conjunction with other assisted conception treatments despite the continuing use of such techniques by reproductive surgeons there remains a clear gap in the literature regarding resources to supplement formal training in the field or to provide a reference for established and aspiring practitioners

Recent Advances in Medically Assisted Conception

1992

this new edition of sarah franklin's classic monograph on the development of in vitro fertilisation ivf includes two entirely new chapters reflecting on the relevance of the book's findings in the context of the past two decades and providing a state of the art review of the field today over the past 25 years both the assisted conception industry and the academic field of reproductive studies have grown enormously ivf in particular is belatedly becoming recognised as one of the most influential technologies of the twentieth and twenty first centuries with a far reaching set of implications that have to date been underestimated understudied and under reported this pioneering text was the first to explore the emergence of commercial ivf in the united kingdom where the technique was originally developed during the 1980s the

british parliament devised a unique system of comprehensive national regulation of assisted reproduction amidst fractious public and media debate over ivf and embryo research franklin chronicles these developments and explores their significance in relation to classic anthropological debates about the meanings of kinship gender and the biological facts of parenthood drawing on extensive personal interviews with women and couples undergoing ivf as well as ethnographic fieldwork in early ivf clinics the book explores the unique demands of the ivf technique in richly detailed chapters it documents the topsy turvy world of ivf and how the experience of undergoing ivf changes its users in ways they had not anticipated franklin argues that such experiences reveal a crucial feature of translational biomedical procedures more widely namely that these are hope technologies that paradoxically generate new uncertainties and risks in the very space of their supposed resolution the final chapter closely engages with the hope technology concept as well as the idea of having to try and uses these frames to link contemporary reproductive studies to core sociological and anthropological arguments about economy society and technology in the context of rapid fertility decline and huge growth in the fertility industry this volume is even more relevant today than when it was first published at the dawn of what franklin calls the era of ifertility embodied progress is an essential read for all social science academics and students with an interested in the burgeoning new field of reproductive studies it is also a valuable resource for practitioners working in the fields of reproductive health biomedicine and policy

Reproductive Surgery in Assisted Conception

2015-04-20

this title was first published in 2003 assisted conception is an area where it often seems that all the ethical and legal issues have been covered and then technology advances and the discussions start all over again the book is an anthology of papers presented during a project looking at thearaputic research in assisted conception trac it is divided into three areas addressing research ethics and law each chapter begins with an overview of the issues with the aim being to present new perspectives rather than covering old ground the european convention on human rights and biomedicine came into force on december 1 1999 the convention allows thearaputic research and research on spare embryos but forbid fundamental research which may be essential to the safe development of new techniques this also means that people may become part of an experimental process without their consent the project brings together clinicians embryologists lawyers and ethicists to ascertain whether there might be a risk of infertility patients being exposed to insufficiently tested procedures and to see if there is a need for fundamental research in this area it also looks at the legislative safeguards that exist and whether a european standard for treatment should be set

Embodied Progress

2022-10-12

reproductive reflexology is a minefield for practitioners with much conflicting advice being given in terms of what we can and cannot do many practitioners choose not to work with clients who are having difficulties conceiving or who are undertaking ivf etc as either they feel too inexperienced or feel it is too complex for them and are not sure when and how to treat the book provides a step by step guide providing practitioners with a structured format on how to gain the information they will need from

their clients how to interpret that information how to plan treatment and what techniques they will need to use

Assisted Conception

2017-11-01

now available in paperback this book takes a fresh look at the social and cultural implications of the new reproductive technologies and assisted conception it has already attracted a wide readership in anthropology sociology and health

Reflexology for Fertility

2016-03-17

an in depth study of lesbian bi and queer women s experiences of thinking about and trying to become a parent beyond expectation draws on eighty two narrative interviews conducted during the late 1990s in british columbia jacquelyne luce chronicles these women s experiences which took place from 1980 to 2000 during a period that saw significant changes to the governance of assisted reproduction and the status of lesbian gay bisexual and transgender parents and same sex partners beyond expectation looks closely at the changing contexts in which women s experiences occurred and draws attention to complex issues such as contracting relationships mediating understandings of biology and genetics and decision making amidst various social legal and medical developments luce skillfully juxtaposes the stories of her interviewees with the wider public discourses about lesbian bi queer parenting and reproductive technology and highlights gaps in existing legislative reforms most importantly beyond expectation foregrounds the lived experiences of lesbian bi and queer women as they negotiate kinship at the intersection of reproduction technology and politics

Technologies of Procreation

2005-08-18

utilizing the very latest assisted reproductive technologies this text provides an introduction to good clinical practice in the investigation and treatment of infertility there are chapters on clinical assessment of the male and the female followed by detailed chapters on the clinical procedures that can be put in place to help overcome infertility also included is coverage of ivf gift and zift and clinical aspects of pgd in addition to how to set up a successful ivf unit

Beyond Expectation

2010-04-02

this guide to micromanipulation techniques for assisted conception in a clinical setting includes detailed descriptions of all common micromanipulation systems currently in use in ivf laboratories in explaining how to optimize their successful use the volume covers state of the art techniques including icsi and procedures such as assisted hatching and the blastomere biopsy for pgd valuable information on troubleshooting mechanical and technical difficulties is provided to help professionals ranging from technicians to consultant obstetricians master the techniques

Good Clinical Practice in Assisted Reproduction

2004-07

infertility and assisted reproductive technologies in india lie at the confluence of multiple cultural conceptions these conceptions are key to understanding the burgeoning spread of assisted reproductive technologies and the social implications of infertility and childlessness in india this longitudinal study is situated in a number of diverse locales which when taken together unravel the complex nature of infertility and assisted conception in contemporary india

Recent Advances in Medically Assisted Conception

1992

worldwide over 75 million people are involuntarily childless a devastating experience for many with significant consequences for the social and psychological well being of women in particular despite greater levels of infertility and strong cultural meanings attached to having children little attention has been paid politically or academically to the needs of minority ethnic women and men this groundbreaking volume is the first to highlight the ways in which diverse ethnic cultural and religious identities impact upon understandings of technological solutions for infertility and associated treatment experiences within western societies it offers a corrective to the dominance of the narratives of hegemonic groups in infertility research the collection begins with a discussion of fertility prevalence and access to treatment for minorities in the west and considers some of the key methodological challenges for social research on ethnicity and infertility drawing on primary research from the us the uk ire germany the netherlands and australia the book then turns the spotlight onto the ways in which minority status and cultural and religious mores might impact on the experience of infertility and assisted reproductive technologies it argues that more equitable access to culturally competent assisted conception services should be an essential component of a transformatory politics of infertility

Micromanipulation in Assisted Conception

2003-11-06

explores the debates about new reproductive technologies in israel and how they fit with orthodox jewish laws concerning parentage and jewish identity

Conceptions

2016-08-01

conceiving kinship is an in depth journey the first of its kind into how heterosexual lesbian and gay couples using programmes of gamete donation conceptualize and make italian kinship it explores the provision of treatment in clinical and non clinical settings at a time when italy was considered the wild west of assisted conception this compelling study provides a new perspective on hotly debated issues in kinship studies and the modern medical technologies it offers fresh insights into longstanding questions of cultural continuities and discontinuities in european kinship

Marginalized Reproduction

2012-05-16

the use of assisted reproductive technologies art may be the only way people who experience infertility can have a child art techniques include artificial insemination in vitro fertilisation intracytoplasmic single sperm injection and surrogacy a number of questions are raised regarding assisted conception practical financial ethical and personal this book examines the science behind reproductive technologies and explores a range of concerns and opinions what are the emotional impacts of infertility on prospective parents and the health risks for the artificially conceived child should women delay motherhood what are the identity issues for the offspring of donor conception does genetic screening promote designer babies and sex selection for the wrong reasons does surrogacy commodify other people s wombs should same sex couples and single parents have taxpayer funded access to this technology chapter 1 assisted conception in australia chapter 2 assisted conception ethics and opinions glossary fast facts links index

Infertility and Assisted Conception

1995-01-01

the human fertilisation and embryology act 2008 was a major update to the uk s laws on the use and regulation of reproductive technology and assisted reproduction

since the enactment of the new law the sector's regulatory body the human fertilisation and embryology authority hfea has also consulted on various related topics including barriers to egg and sperm donation in the uk multiple births single embryo transfer and using ivf technology to prevent mitochondrial disease this book critically considers recent developments in human fertilisation legislation asking whether the 2008 act has achieved its stated aim of being fit for purpose bringing together a range of international experts the book evaluates the fresh risks and challenges emerging from both established and existing technologies and techniques in the field of human fertilisation and embryology as well as offering valuable insights into the social and regulatory challenges that lie ahead key topics include problems with diy assisted conception the lack of reform in respect of the regulation of surrogacy arrangements and mitochondrial dna transfer as a review of the status of assisted reproduction legislation this book will be of great use and interest to students researchers and practitioners in medical law bioethics medicine and child welfare

Reproducing Jews

2000

now available in paperback this book takes a fresh look at the social and cultural implications of the new reproductive technologies and assisted conception it has already attracted a wide readership in anthropology sociology and health

Assisted Conception

1993-05-01

the advent of assisted conception procedures such as in vitro fertilisation ivf has provided the impetus for exploration of the factors that lead to the establishment of pregnancy this collection of papers from leading research workers brings together current concepts of the processes which may be of importance in implantation the complex signals from the embryo to the ovary endometrium and myometrium are now being revealed through studies in both primates and other mammalian species this book addresses the interrelationship of pituitary and ovarian hormones in controlling ovulation and the preparation of the intrauterine environment for implantation once fertilisation has occurred and trophoblast has formed the next vital step is the production of materials which signal the presence of the pregnancy to the rest of the body trophoblastic proteins and other early pregnancy factors are prime candidates for this role recent studies have emphasised the importance of the intrauterine environment in implantation specific secretory products of the endometrium have great potential in this process the prostaglandins also play an essential part immunological adjustments are now considered a condition for the successful establishment of pregnancy the possible use of immunotherapy in the treatment of recurrent abortion has highlighted interest in this area the use of immunological techniques for contraception are in their infancy but offer much hope for the future

Conceiving Kinship

2009

the event of human implantation has attracted considerable scientific interest with the advent of assisted conception procedures this book outlines current research in relation to the establishment of human pregnancy the areas of endocrinology protein biochemistry prostaglandins and immunology are all covered chapters have been contributed by international experts who represent various viewpoints this scientific data is combined with clinical aspects the diagnosis and treatment of infertility early pregnancy problems and the failure of gestation the combined presentation of basic sciences with clinical practice will capture the interest of all those dealing with the endocrinology and metabolism of human reproduction

Assisted Conception

2010-01-01

this textbook is intended as a practical guide for scientists and clinicians engaged in work on in vitro fertilization contributions from an international team of specialists aim to provide comprehensive coverage of the subject

Revisiting the Regulation of Human Fertilisation and Embryology

2015-06-19

this document contains papers on the following topics a review of medically assisted reproductive technologies a socio historical examination of the development of in vitro fertilization and related assisted reproductive techniques the professions involved in new reproductive technologies legislation inquiries and guidelines on infertility treatment and surrogacy preconception contracts an overview of donor insemination issues and responses to artificial insemination the social meanings of donor insemination lesbian women and donor insemination self insemination in canada the conceptual framework of donor insemination and a bibliography of artificial insemination

Families from Assisted Conception

2001

a reassuring and practical handbook addresses the specific concerns of women over the age of thirty five in regard to a safe pregnancy covering everything from fertility

issues and labor options to juggling a family and career remedies for common pregnancy related ailments and trimester plans for diet exercise and relaxation

Assisted conception

1989

this newly redesigned edition of family law the essentials 2e provides accurate concise coverage of family law with an emphasis on practical paralegal skills and technique the text presents all the standard topics that must be covered in a family law course but does so in a briefer format than the comprehensive family law by the same author it is ideal for use in shorter courses or for courses that supplement a text with state specific material
