The Donora Death Fog 2016-04-25 the collective focus of the essays here presented consists of the attempt to overcome the deadlock between metaphysical and non or anti metaphysical hegel interpretations there is no doubt that hegel rejects traditional and influential forms of metaphysical thought there is also no doubt that he grounds his philosophical system on a metaphysical theory of thought and reality the question asked by the contributors in this volume is therefore what kind of metaphysics does hegel reject and what kind does he embrace some of the papers address the issue in general and comprehensive terms but from

different even opposite perspectives hegel s claim of a unity of logic and metaphysics his potentially deflationary understanding of metaphysics his overt metaphysical commitments his subject less notion of logical thought and his criticism of kant s critique of metaphysics other contributors discuss the same topics in view of very specific subject matter in hegel s corpus to wit the philosophy of self consciousness practical philosophy teleology and holism a particular brand of naturalism language s relation to thought true and spurious infinity as pivotal in philosophic thinking and hegel s conception of human agency and action

Day Trips® from Kansas City 2022-12-06 explores the important role of the brain in both the experience of pain and its resolution pain is a product of the brain which announces it after being warned by a small army of nociceptors stationed throughout the body always on alert for any threat to the overall system but there can be glitches in that process chronic pain often occurs when the brain remembers pain even though the condition that caused it may have been dealt with and resolved still pain is misunderstood by many including both sufferers and the physicians they seek out to treat it in recent years though new light has been shed on just what causes pain how it is experienced in the body how it can go haywire and how it can be resolved pain may no longer be just a symptom of some other malady in some cases it becomes a condition all to itself here dr akhtar purvez a seasoned physician dedicated to the study and treatment of pain offers a comprehensive view of how chronic pain is felt transmitted and modified by the nerves and the brain he explores the interplay of the physiological anatomical and emotional aspects of pain in addition to the mental health aspects cultural differences and the role of addiction in pain sufferers alongside

this enlightening overview dr purvez provides hope to readers as he details ways of treating pain and the new approaches that are becoming available we all experience physical pain at some point in our lives but no longer does it have to rule our lives or impact our functioning or overall wellness if we can find the right ways to understand and treat it this work is the starting point

A Life at the Crossroads 2018-03-30 a theoretical account of moral revolutions illustrated by historical cases that include the criminalization and decriminalization of abortion and the patient rebellion against medical paternalism we live in an age of moral revolutions in which the once morally outrageous has become morally acceptable and the formerly acceptable is now regarded as reprehensible attitudes toward same sex love for example and the proper role of women have undergone paradigm shifts over the

last several decades in this book robert baker argues that these inversions are the product of moral revolutions that follow a pattern similar to that of the scientific revolutions analyzed by thomas kuhn in his influential book the structure of scientific revolutions after laying out the theoretical terrain baker develops his argument with examples of moral reversals from the recent and distant past he describes the revolution led by the utilitarian philosopher jeremy bentham that transformed the postmortem dissection of human bodies from punitive desecration to civic virtue the criminalization of abortion in the nineteenth century and its decriminalization in the twentieth century and the invention of a new bioethics paradigm in the 1970s and 1980s supporting a patient led rebellion against medical paternalism finally baker reflects on moral relativism arguing that the acceptance of absolute moral truths denies us the diversity of moral perspectives that permit us to alter our morality in response to changing environments
