articles describe the vision and the way globalized dsmls currently assist integrated dsml support teams working on systems that span many domains and concerns to determine how their work on a particular aspect influences work on other aspects globalized dsmls offer support for communicating relevant information and for coordinating development activities and associated technologies within and across teams in addition to providing support for imposing control over development artifacts produced by multiple teams dsmls can be used to support socio technical coordination by providing the means for stakeholders to bridge the gap between how they perceive a problem and its solution and the programming technologies used to implement a solution they also support coordination of work across multiple teams dsmls developed in an independent manner to meet the specific needs of domain experts have an associated framework that regulates interactions needed to support collaboration and work coordination across different system domains the articles in the book describe how multiple heterogeneous modeling languages or dsmls can be related to determine how different aspects of a system influence each other the book includes a research roadmap that broadens the current dsml research focus beyond the development of independent dsmls to one that provides support for globalized dsmls
