we can think graphs of absolute value and quadratic functions as transformations of the parent functions x and x^2 importantly we can extend this idea to include transformations of any function whatsoever

transformation transformers wiki tfwiki net

Jun 02 2023

transformation also known as conversion refers to the overall process by which a transformer changes from one mode into another this usually refers to their ability to shift between robot and alternate modes

rotations intro article transformations khan academy

May 01 2023

every rotation is defined by two important parameters the center of the rotation we already went over that and the angle of the rotation the angle determines by how much we rotate the plane about the center for example we can tell that a is the result of rotating a about p but that is not exact enough
