are dizzying what does it really mean to understand the genome barry barnes and john dupré offer an answer to that question and much more in genomes and what to make of them a clear and lively account of the genomic revolution and its promise the book opens with a brief history of the science of genetics and genomics from mendel to watson and crick and all the way up to craig venter from there the authors delve into the use of genomics in determining evolutionary paths and what it can tell us for example about how far we really have come from our ape ancestors barnes and dupré then consider both the power and risks of genetics from the economic potential of plant genomes to overblown claims that certain human genes can be directly tied to such traits as intelligence or homosexuality ultimately the authors argue we are now living with a new knowledge as powerful in its way as nuclear physics and the stark choices that face us between biological warfare and gene therapy a new eugenics or a new agricultural revolution will demand the full engagement of both scientists and citizens written in straightforward language but without denying the complexity of the issues genomes and what to make of them is both an up to date primer and a blueprint for the future semiring theory stands with a foot in each of two mathematical domains the first being abstract algebra and the other the fields of applied mathematics such as optimization theory the theory of discrete event dynamical systems automata theory and formal language theory as well as from the allied areas of theoretical computer science and theoretical physics most important applications of semiring theory in these areas turn out to revolve around the problem of finding the equalizer of a pair of affine maps between two semimodules in this volume we chart the state of the art on solving this problem and present many specific cases of applications this book is essentially the third part of a trilogy along with semirings and their applications and power algebras over semirings both written by the same author and published by kluwer academic publishers in 1999 while each book can be read independently of the others to get the full force of the theory and applications one should have access to all three this work will be of interest to academic and industrial researchers and graduate students the intent of the book is to bring the applications to the attention of the abstract mathematicians and to make the abstract mathematics available to those who are using these tools in an ad hoc manner without realizing the full force of the theory just when you think its your day week month or even year to finally get started something comes up to get in the way if its not your job its your family if its not your family its your job or something else its a vicious cycle that never seems to end reggie truly understands what youre going through even though you may think youre all alone reggie has been where youre at and he wants to show you ways to get going no matter what your excuse or reason may be for being stalled top 10 reasons to avoid exercise and how to overcome them is designed to give you examples on how you can overcome your battles of the initial start top 10 reasons connect by interviewing individuals from different walks of life some just like you and letting them tell their stories of triumph over the excuses reggie lamptey exercise awareness motivator is passionate dedicated and driven after years of trying to find what he truly wanted to do reggie decided to turn his dream of helping people attain their goals into a reality he founded body defining llc to help as many people as possible reach and live out their dreams for better health reggie inspires people to push themselves as hard as possible with his belief that no dream is unattainable them dark days is a study of the callous capitalistic nature of the vast rice plantations along the southeastern coast it is essential reading for anyone whose view of slavery s horrors might be softened by the current historical emphasis on slave community and family and slave autonomy and empowerment looking at gowrie and butler island plantations in georgia and chicora wood in south carolina william dusinberre considers a wide range of issues related to daily life and work there health economics politics dissidence coercion discipline paternalism and privilege based on overseers letters slave testimonies and plantation records them dark days offers a vivid reconstruction of slavery in action and casts a sharp new light on slave history in an age when anxiety depression and suicide in children is at an all time high bring them closer is a beacon of hope leah everson mdiv public speaker and writer while there s no quick fix or a one size

the three neutrinos are ghostly elementary particles that exist all across the universe though every second billions of them fly through us they are extremely hard to detect we used to think they had no mass but recently discovered that in fact they have a tiny mass the quest for the neutrino mass scale and mass ordering specifying how the three masses are distributed is an extremely exciting one and will open the door towards new physics operating at energy scales we can only ever dream of reaching on earth this thesis explores the use of measurements of the cosmic microwave background the oldest light reaching us a snapshot of the infant universe and maps of millions of galaxies to go after the neutrino mass scale and mass ordering neutrinos might teach us something about the mysterious dark energy powering the accelerated expansion of the universe or about cosmic inflation which seeded the initial conditions for the universe though extremely baffling neutrinos are also an exceptionally exciting area of research and cosmological observations promise to reveal a great deal about these elusive particles in the coming years
