at many times in educational history including the past decade there are reports of crisis and cries for reform the successes of foreign competitors are pointed to new moneys are sought and laws passed occasionally these reform efforts make a difference just as often they end up as mere rhetoric and the educational indicators continue to slide education is a dynamic sector with its ups and downs to understand these ups and downs and to gain a clearer grasp of the essentials of reform we need to look deeply into the origins and development of successful and failed reforms this book seeks to answer that need to do so it stresses two important themes first the essence of educational practice lies in the institutionalised ideals and norms of an educational system not in how much is spent on education or how many people are involved in education second while many contemporary observers of education tend to think that sound educational practice is pretty much the same around the world this book argues that these are at least six distinctive educational institutions currently in place in the modern world each with its unique strengths and weaknesses each also has its own cycle of reform and renewal so the landscape of educational reform is much broader than most observers acknowledge the book is unique in highlighting the principle characteristics of japanese education alongside those of soviet russia and the core educational systems of western europe and north america while the account focuses on national differences the analysis actually begins from the ground up looking at particular schools that emerged early in the six modernising experiences these early schools are described here as representative schools for the practices they initiated have had a profound influence on the direction of subsequent reforms in their respective national settings

china s urban sprawl has led to serious social cleavages unclear land and property rights have resulted in an uneasy alliance between real estate companies and local authorities with most willing to strike illegal deals over land the results have been

devastating farmers live in fear that the land they till today will be gone tomorrow while urban citizens are regularly evicted from their homes to make way for new skyscrapers and highways these shocking incidents underscore the urgency of the land question in china the recent conviction of the chinese minister for land resources and the forced evictions that have led to the injury and death of ordinary chinese citizens highlight the case for land reform against this backdrop many scholars criticize china s lack of privatization and titling of property this monograph however demonstrates that these critically depend on timing and place land titling is imperative for the wealthier regions yet may prove detrimental in areas with high poverty the book argues that china s land reform can only succeed if the clarification of property rights is done with caution and ample regard for regional variations

this book presents a novel and innovative approach to the study of social evolution using case studies from the old and the new world from prehistory to the present this approach is based on examining social evolution through the evolution of social institutions evolution is defined as the process of structural change within this framework the society or culture is seen as a system composed of a vast number of social institutions that are constantly interacting and changing as a result the structure of society as a whole is also evolving and changing the authors posit that the combination of evolving social institutions explains the non linear character of social evolution and that every society develops along its own pathway and pace within this framework society should be seen as the result of the compound effect of the interactions of social institutions specific to it further the transformation of social institutions and relations between them is taking place not only within individual societies but also globally as institutions may be trans societal and even institutions that operate in one society can arise as a reaction to trans societal trends and demands the book argues that it may be more productive to look at institutions even within a given society as being parts of trans societal systems of institutions since despite their interconnectedness societies still have boundaries which their members usually know and respect accordingly the book is a must read for researchers and scholars in various disciplines who are interested in a better understanding of the origins history successes and failures of social institutions
