as the result of disposal practices from the early to mid twentieth century approximately 250 sites in 40 states the district of columbia and 3 territories are known or suspected to have buried chemical warfare materiel cwm much of this cwm is likely to occur in the form of small finds that necessitate the continuation of the army s capability to transport treatment systems to disposal locations for destruction of greatest concern for the future are sites in residential areas and large sites on legacy

military installations the army mission regarding the remediation of recovered chemical warfare materiel rcwm is turning into a program much larger than the existing munition and hazardous substance cleanup programs the army asked the nation research council nrc to examine this evolving mission in part because this change is significant and becoming even more prominent as the stockpile destruction is nearing completion one focus in this report is the current and future status of the non stockpile chemical material project nscmp which now plays a central role in the remediation of buried chemical warfare materiel and which reports to the chemical materials agency remediation of buried chemical warfare materiel also reviews current supporting technologies for cleanup of cwm sites and surveys organizations involved with remediation of suspected cwm disposal sites to determine current practices and coordination in this report potential deficiencies in operational areas based on the review of current supporting technologies for cleanup of targeted research and development efforts to mitigate potential problem areas are identified
