epidemiology

## ***chapter 1 what is epidemiology the bmj Feb 10*** ***2024***

epidemiology is the study of how often diseases occur in different groups of  
people and why epidemiological information is used to plan and evaluate  
strategies to prevent illness and as a guide to the management of patients in  
whom disease has already developed

## ***epidemiological concepts pmc national center for Jan 09 2024***

## ***the science of epidemiology and the methods needed for public* *Feb 27 2023***

epidemiology is often described as the science of public health here we aim to assess the extent that epidemiological methods as covered in contemporary standard textbooks provide tools that can assess the relative magnitude of public health problems and can be used to help rank and assess public health priorities study design

## **advances in epidemiology using 21st century science to Nov 26 2022**

the descriptive element of epidemiology comprises tracking of health and disease indicators and population risk factors surveillance the etiological activities searching for the causes and determinants of disease involve primarily case control and cohort studies
