RocketPrep PMP Project Management Concepts: 600 Practice Questions and Answers: Dominate Your Certification Exam 2018-04-06 this paper discusses issues in calibrating the countercyclical capital buffer ccb based on a sample of eu countries it argues that the main indicator for buffer decisions under the basel iii framework the credit to gdp gap does not always work best in terms of covering bank loan losses that go beyond what could be expected from economic downturns instead in the case of countries with short financial cycles and or low financial deepening such as transition and developing economies the basel gap is shown to work best when computed with a low smoothing factor and adjusted for the degree of financial deepening the paper also analyzes issues in calibrating an appropriate size of the ccb and using a loss function approach points to a tradeoff between stability of the buffer size and cost efficiency considerations
