DL Vol.1 Vol.3 2007-10 string art is a well known and popular activity that uses string a board and nails to produce artistic images although there are variations that use different modalities this activity is beloved because simple counting rules are used to create beautiful images that can both adorn walls and excite young minds the downside of this highly tactile activity is that it is quite time consuming and rigid by contrast electronic string art offers much more flexibility to set up or change nail locations and counting rules and the images created from those changes change instantaneously electronic string art rhythmic mathematics invites readers to use the author s digital resources available on the esa website to play with the parameters inherent in string art models while offering concise accessible explanations of the underlying mathematical principles regarding how the images were created and how they change readers will have the opportunity to create visually beautiful works of art

while learning concepts from geometry number theory and modular arithmetic from approximately 200 short interdependent sections features readers are able to drill down on images in order to understand why they work using short 1 to 2 page stand alone sections sections are lessons that were created so that they could be digested in a single sitting these sections are stand alone in the sense that they need not be read sequentially but can be referred to based on images that the reader finds interesting an open ended inherently flexible teaching resource for elementary middle and high school level mathematics the most mathematically challenging sections or portions of a section are designated ma and may not be accessible to elementary and middle school readers will be appreciated by anyone interested in recreational mathematics or mathematical artworks even if the users are not interested in the underlying mathematics includes exercises solutions and many online digital resources these qr codes take you to these digital resources one takes you directly to the web version of the string art model used as a starting point for teaching the parameters of the model in section 25 5 the other takes you to the esa web page with additional links to a variety of resources

Models, Methods, Concepts & Applications of the Analytic Hierarchy Process 1992 from a pioneer in experimental economics an expanded and updated edition of a textbook that brings economic experiments into the classroom economics is rapidly becoming a more experimental science and the best way to convey insights from this research is to engage students in classroom simulations that motivate subsequent discussions and reading in this expanded and updated second edition of markets games and strategic behavior charles holt one of the leaders in experimental economics provides an unparalleled introduction to the study of economic behavior organized around risky decisions games of strategy and economic markets that can be simulated in class each chapter is based on a key experiment presented with accessible examples and

just enough theory featuring innovative applications from the lab and the field the book introduces new research on a wide range of topics core chapters provide an introduction to the experimental analysis of markets and strategic decisions made in the shadow of risk or conflict instructors can then pick and choose among topics focused on bargaining game theory social preferences industrial organization public choice and voting asset market bubbles and auctions based on decades of teaching experience this is the perfect book for any undergraduate course in experimental economics or behavioral game theory new material on topics such as matching belief elicitation repeated games prospect theory probabilistic choice macro experiments and statistical analysis participatory experiments that connect behavioral theory and laboratory research largely self contained chapters that can each be covered in a single class guidance for instructors on setting up classroom experiments with either hand run procedures or free online software end of chapter problems including some conceptual design questions with hints or partial solutions provided
