what is psychology when did it begin where did it come from how does psychology compare with related subjects such as psychiatry and psychotherapy to what extent is it scientific introducing psychology answers all these questions and more explaining what the subject has been in the past and what it is now the main schools of thought and the sections within psychology are described including introspection biopsychology psychoanalysis behaviourism comparative animal psychology cognitive approaches including the gestalt movement social psychology developmental psychology and humanism the key figures covered include freud pavlov skinner bandura piaget bowlby maslow and rogers as well as many lesser known but important psychologists this book explores the nature of one of the most ancient tools for nonverbal communication drawings they are naturally adaptable enough to meet an incredibly wide range of communication needs but how exactly do they do their job so well avoiding the kinds of aesthetic rankings of different graphic domains so often made by art historians and critics manfredo massironi considers an extensive and representative sample of graphic applications with an open mind he finds a deep mutuality between the material components of images and the activation of the perceptual and cognitive processes that create and decipher them massironi first examines the material components themselves the mark or line the plane of representation the angle formed by the actual drawing surface and the depicted objects and the position of the viewpoint relative to the depicted objects the roles played by these three components are independent of the content of the drawing they function in the same way in concrete and abstract representations he then closely scrutinizes the choices made by the person planning and executing the drawings given that any object can be depicted in an infinite number of different ways the drawer performs continuous work emphasizing and excluding different features the choices are typically unconscious and guided by his or her communicative goals a successful graph be it simple or complex is always successful precisely because the emphasized features are far fewer in number than the excluded ones finally he analyzes the perceptual and cognitive integrations made by the viewer drawings are not simply tools for communication but important instruments for investigating reality and its structure richly illustrated the book includes a series of graphic exercises that enable readers to get a sense of their own perceptual and cognitive activity when inspecting images massironi's pathbreaking taxonomy of graphic productions will illuminate all the processes involved in producing and understanding graphic images for a wide audience in fields ranging from perceptual and cognitive psychology through human factors and graphic design to architecture and art history drawings are not simply tools for communication but important instruments for investigating reality and its structure this pathbreaking book richly illustrated with exercises for readers illuminates the complex interactions between elementary school to the advanced college level various types of illustrations are included in educational materials in order to promote learning these illustrative adjuncts are often profuse and in many cases they may be the most striking feature that distinguishes one set of learning materials from another in addition the perceived effectiveness of the illustrations clearly plays an important role in the marketing of many educational materials despite this pervasiveness and salience in education there has never been a systematic effort to bring together the results of research on illustrations in order to provide some level of guidance to the developers of commercial learning materials there is however a considerable research literature that is directly relevant to this aspect of education the purpose of the present two volume set is to summarize and interpret the existing research literature that deals with the various educational functions of illustrations in undertaking to produce an omnibus reference work on psychological and instructional issues surrounding illustrated learning material our paramount aim has been to stimulate closer collaboration between researchers producers and users of educational text the problems associated with moving the findings of educational research into the realm of everyday practice have been perennial ones while many researchers and practitioners are interested in fundamentally similar questions they typically speak dissimilar languages read different journals and carry out their work under disparate ideologies the second symposium on processing visible language constituted a different mix of participants from the first greater emphasis was given to the design of language both in its historical development and in its current display and to practical questions associated with machine implementation of language in the interactions of person and computer and in the characteristics of the physical and environmental objects that affect the interaction another change was that a special session on theory capped the proceedings psychologists remained heavily involved however both as contributors to and as discussants of the work presented the motivation of the conferences remains one of bringing together graphic designers engineers and psychologists concerned with the display and acquisition of visible language the papers separately tended to emphasize the one of the three disciplines that mark their authors field of endeavor but are constructed to be general rather than parochial moreover within the three disciplines papers emphasized either the textual or the more pictorial aspects for example a session on writing systems ranged from principles that seem to characterize all such systems to specific papers on ancient egyptian writing modern korean and english shorthand the complementary session on the nontextual media opened with a discussion of general principles of pictorial communication and included papers on communicating instructions general information or religious belief through designs and other pictorial forms as well as a discussion of misrepresentation this
