Wicked Solutions : A Systems Approach to Complex Problems 2016-01-29 the classical approach for solving evolution partial differential equations pdes using a parallel computer consists in first partitioning the spatial domain and assigning each subdomain to a processor to achieve space parallelism then advancing the solution sequentially however enabling parallelism along the time dimension despite its intrinsic difficulty can be of paramount importance to fast computations when space parallelism is unfeasible cannot fully exploit a massively parallel machine or when near real time prediction is desired the aforementioned objective can be achieved by applying classical domain decomposition principles to the time axis the latter is first partitioned into time slices to be processed independently starting with approximate seed information that provides a set of initial conditions the response is then advanced in parallel in each time slice using a standard time stepping integrator this decomposed solution exhibits discontinuities or jumps at the time slice boundaries if the initial guess is not accurate applying a newton like approach to the time dependent system a correction function is then computed to improve the accuracy of the seed values and the process is repeated until convergence is reached methods based on the above concept have been successfully applied to various problems but none was found to be competitive for even for the simplest of second order hyperbolic pdes a class of equations that covers the field of structural dynamics among others to overcome this difficulty a key idea is to improve the sequential propagator used for correcting the seed values observing that the original evolution problem and the derived corrective one are closely related the present work first demonstrates how this insight can be brought to fruition in the context of linear oscillators with numerical examples featuring structural models ranging from academic to more challenging large scale ones an extension of this method to nonlinear equations is then developed and its concrete application to geometrically nonlinear transient dynamics is presented finally it is shown how the time reversibility property that characterizes some of the above problems can be exploited to develop a new framework that provides an increased speed up factor

The Art of Problem Solving Vol. I 1995 the universal problem solving approach ah problems why must you annoyingly occur in my life can t i just avoid you unless you re perfect which newsflash nobody is problems are inevitable and should be expected let that sink in for a few seconds now that s not to say that you should go through life always expecting the worst on the contrary you should always be prepared for these natural unfortunate phenomena with a particular set of problem solving skills in order to know how to manage and handle problems effectively when they do occur what do we mean by a particular set of problem solving skills first off don t be taken by the notion of not every problem has a solution yes problems do come in all shapes and sizes however there are universal ways of tackling them you see the whole point of problem solving is to creatively come up with different solutions to yield the one best outcome possible to do that you have to approach problems

formulaically like an equation and work backward systematically to obtain that ideal outcome that's what easier smarter problem solving will show you how to do by giving you a simple roadmap system for universally solving any kind of problem that can creep up in your life generate unlimited solutions to various problems using the xyz equation decipher the heart of a problem with bird's eye view to attack it directly compromise tough issues with difficult people and win reciprocal favors handle more personal internal dilemmas like a true champ winning on top get the desired outcome from messy conflict through the kasg principles and a whole lot more to become an effective problem solver so there is no problem too big to solve whatever it is you are dealing with in life you can now easily plug and play to derive at a simple solution all by following a few simple guidelines solve problem smarter not harder finding solutions to problems has never been this straightforward and serendipitous

Time-parallel Methods for Accelerating the Solution of Structural Dynamics Problems 2011 in recognizing the limitations of traditional problem solving methods solution focus has aided many individuals in changing their perception of problems and transforming them into solutions regardless of what difficulties one may be tackling this book offers practical skills for overcoming filled with examples and illustrations it addresses and explains the role of the all important "miracle" questions as well as "exceptions" "scaling" and "coping" questions to help identify leverage points for change active listening a key solution focus skill is reviewed extensively in addition readers will learn how to establish well formed goals and understand the truth of the philosophical statement "if it isn't broke don't fix it" solution focusâ radical simplicity diverts your attention away from the often frustrating search for the causes of problems and directs it to solutions away from your weaknesses to your strengths away from what is going wrong to what is going right in your life though it may not be a fix all it will certainly give you a viable alternative to outdated problem solving strategies and teaches how to put solution focused knowledge into everyday practical use if you want to learn a new way of assisting yourself or others to deal more creatively and effectively with problems then you are encouraged to explore solution focusâ simple principles and tools for positive change
