

Free ebook Gone with the wind part two penguin readers (2023)

noun movement of air from a high pressure zone to a low pressure zone caused by the uneven heating of the earth by the sun wind energy noun kinetic energy produced by the movement of air able to be converted to mechanical power noun area with a large group of wind turbines used to generate electric power contracting air creates zones of low pressure they pull nearby air inward that s why the wind blows it moves from regions of high pressure to those where pressure is lower the zone between the high and low pressure areas is known as a pressure gradient or a zone over which the pressure varies from high to low wind air in motion 2 min read the energy that drives wind originates with the sun which heats the earth unevenly creating warm spots and cool spots two simple examples of this are sea keep scrolling to start reading what is wind how does wind form wind is the horizontal motion of the air past a given point winds begin with differences in air pressures when air pressure is higher at one place than another it sets up a force this force pushes from the high pressure towards the lower pressure a summary of part one chapters 1 4 in margaret mitchell s gone with the wind learn exactly what happened in this chapter scene or section of gone with the wind and what it means perfect for acing essays tests and quizzes as well as for writing lesson plans wind is a part of weather we experience all the time but why does it actually happen the air will be still one day and the next powerful gusts of wind can knock down trees what is going on here the main cause of wind is a little surprising it s actually temperature more specifically it s differences in temperature between different areas global wind explained the illustration below portrays the global wind belts three in each hemisphere note that the u s lies primarily in the westerly wind belt with prevailing winds from the west each of these wind belts represents a cell that circulates air through the atmosphere from the surface to high altitudes and back again the westerlies and trade winds winds are part of earth s atmospheric circulation easterly winds on average dominate the flow pattern across the poles westerly winds blow across the mid latitudes of the earth polewards of the subtropical ridge while easterlies again dominate the tropics margaret mitchell characters literary devices themes
