shorn of all subtlety and led naked out of the protective fold of educational research literature there comes a sheepish little fact lectures don't work nearly as well as many of us would like to think george cobb 1992 this book contains activities that guide students to discover statistical concepts explore statistical principles and apply statistical techniques students work toward these goals through the analysis of genuine data and through interaction with one another with their instructor and with technology providing a one semester introduction to fundamental ideas of statistics for college and advanced high school students workshop statistics is designed for courses that employ an interactive learning environment by replacing lectures with hands on activities the text contains enough expository material to stand alone but it can also be used to supplement a more traditional textbook some distinguishing features of workshop statistics are its emphases on active learning conceptual understanding genuine data and the use of technology the following sections of this preface elaborate on each of these aspects and also describe the unusual organizational structure of this text

there is a longstanding scholarly debate on the nature of prophecy in ancient israel until now no study has based itself on the semantics of the hebrew lexeme nābî' prophet this investigation by william l kelly discusses the nature and function of prophecy in the corpus of the hebrew book of jeremiah it analyses all occurrences of nābî' in jeremiah and performs a close reading of three primary texts jeremiah 1 4 19 23 9 40 and 27 1 28 17 the result is a detailed explanation of how prophecy works and what it meant to call someone a nābî' in ancient israel combining the results of the semantic analysis and close readings the study reaches conclusions for six main areas of study 1 the function and nature of prophecy 2 dreams and visions 3 being sent 4 prophets priests and cult 5 salvation and doom and 6 legitimacy and authority these conclusions explain the conceptual categories related to nābî' in the corpus i then situate these findings in two current debates one on the definition of nābî' and one on cultic prophecy this study contributes to critical scholarship on prophecy in the ancient world on the book of jeremiah and on prophets in ancient israel it is the first major study to analyse nābî' based on its semantic associations it adds to a growing consensus which understands prophecy as a form of divination contrary to some trends in jeremiah scholarship this work demonstrates the importance of a close reading of the masoretic hebrew text this study uses a method of a general nature which can be applied to other texts thus there are significant implications for further research on prophecy and prophetic literature

today as the large international genome sequence projects are gaining a great amount of public attention and huge sequence data bases are created it becomes more and more obvious that we are very limited in our ability to access functional data for the gene products the proteins in particular for enzymes those data are inherently very difficult to collect interpret and standardize as they are highly distributed among journals from different fields and are often subject to experimental conditions nevertheless a systematic collection is essential for our interpretation of the genome information and more so for possible applications of that knowledge in the fields of medicine agriculture etc recent progress on enzyme immobilization enzyme production enzyme inhibition coenzyme regeneration and enzyme engineering has opened up fascinating new fields for the potential application of enzymes in a large range of different areas it is the functional profile of an enzyme that enables a biologist or physician to analyze a metabolic pathway and its disturbance it is the substrate specificity of an enzyme which tells an analytical biochemist how to design an assay it is the stability specificity and efficiency of an enzyme which determines its usefulness in the biotechnical transformation of a molecule and the sum of all these data will have to be considered when the designer of artificial biocatalysts has to choose the optimum prototype to start with
