the organizers of this sixth symposium maintained their initial objectives namely to gather experts from both industries and universities to discuss the scientific problems involved in the preparation of heterogeneous catalysts and to encourage as much as possible the presentation of research work on catalysts of real industrial significance another highlight of these symposia is to reserve a substantial part of the program to new developments in catalyst preparation new preparation methods and new catalytic systems the fact that chemical reactions which were hardly conceivable some years ago have become possible today through the development of appropriate

catalytic systems proves that catalysis is in constant progress the papers in this volume deal with preparation of new catalysts and supports catalyst preparation via sol gel methods supported catalysts and synthesis of nanometer size catalysts

the significant progress achieved in modern instrumental analysis has led to a continuous lowering of detection limits and improved precision this should in principle permit the reliable and extremely precise analysis of trace compounds

mainly trace elements at levels down to the lowest natural concentrations however the frequently observed very high discrepancies between the analytical results of different laboratories as well as the deviations from true values are regrettably still common in analytical practice basic methodological errors at the determination step can usually be minimized or even avoided by carefully performed quality control measures e g by interlaboratory comparisons and the proper use of certified reference materials the most severe and often underestimated error sources however are those connected with the whole and often extremely complex sampling process and also to a lesser extent with sample preparation prior to analysis thus for these initial steps of an analytical procedure particular experience is needed as well as a detailed knowledge of the interrelations between these steps which always have to be applied with the utmost care in collaboration with a number of very experienced colleagues working in different research areas the editor of this book has tried to contribute to a better understanding of these particular error sources and how they can be overcome in a series of training courses held during the last decade at the Haus der Technik Essen Germany
