alchemy can't be science common sense tells us as much but perhaps common sense is not the best measure of what science is or was in this book bruce moran looks past contemporary assumptions and prejudices to determine what alchemists were actually doing in the context of early modern science examining the ways alchemy and chemistry were studied and practiced between 1400 and 1700 he shows how these approaches influenced their respective

practitioners ideas about nature and shaped their inquiries into the workings of the natural world his work sets up a dialogue between what historians have usually presented as separate spheres here we see how alchemists and early chemists exchanged ideas and methods and in fact shared a territory between their two disciplines distilling knowledge suggests that scientific revolution may wear a different appearance in different cultural contexts the metaphor of the scientific revolution moran argues can be expanded to make sense of alchemy and other so called pseudo sciences by including a new framework in which process can count as an object in which making leads to learning and in which the messiness of conflict leads to discernment seen on its own terms alchemy can stand within the bounds of demonstrative science

once patronized primarily by the counterculture and the health food establishment the organic food industry today is a multi billion dollar business driven by ever growing consumer demand for safe food and greater public awareness of ecological issues assumed by many to be a recent phenomenon that industry owes much to agricultural innovations that go back to the dust bowl

era this book explores the roots and branches of alternative agricultural ideas in twentieth century america showing how ecological thought has challenged and changed agricultural theory practice and policy from the 1930s to the present it introduces us to the people and institutions who forged alternatives to industrialized agriculture through a deep concern for the enduring fertility of the soil a passionate commitment to human health and a strong advocacy of economic justice for farmers randal beeman and james pritchard show that agricultural issues were central to the rise of the environmental movement in the united states as family farms failed during the depression a new kind of agriculture was championed based on the holistic approach taught by the emerging science of ecology ecology influenced the permanent agriculture movement that advocated such radical concepts as long term land use planning comprehensive soil conservation and organic farming then in the 1970s sustainable agriculture combined many of these ideas with new concerns about misguided technology and an over consumptive culture to preach a more sensible approach to farming in chronicling the overlooked history of alternative agriculture a green and permanent land records the significant contributions of individuals like rex tugwell hugh bennett louis bromfield edward faulkner russell and kate lord scott and helen nearing robert rodale wes jackson and groups like friends of the land and the practical farmers of iowa and by demonstrating how agriculture also remains central to the public interest especially in the face of climatic crises genetically altered crops and questionable uses of pesticides this book puts these issues in historical perspective and offers readers considerable food for thought
